# Java EE 6 & GlassFish 3 using Eclipse

Oracle GlassFish Server Tools

Part of Oracle Enterprise Pack for Eclipse 11.1.1.6.0

Provides tools for developing Java EE applications for GlassFish Server Open Source Edition 3 and Oracle GlassFish Server 3 (Java EE 6) and GlassFish 2 (Java EE 5).

## Dynamic Web Project

Create a standalone Dynamic Web project or add it to a new or existing Enterprise Application.

Project name: HelloGlassFish

### Project location

Use default location

Location: /Users/arungupta/Documents/workspace/oepe/HelloGlassFish

[Browse...](#)

### Target runtime

GlassFish Server Open Source Edition 3 (Java EE 6)

[New Runtime...](#)

### Dynamic web module version

3.0

### Configuration

Default Configuration for GlassFish Server Open Source Edition 3 (Java EE 6)

[Modify...](#)

A good starting point for working with GlassFish Server Open Source Edition 3 (Java EE 6) runtime.  
Additional facets can later be installed to add new functionality to the project.

### EAR membership

Add project to an EAR

EAR project name: EAR

[New Project...](#)

### Working sets

Add project to working sets

Working sets:

ORACLE®

# Integrated & Off-line Javadocs

The screenshot shows a Java development environment with the following interface elements:

- Project Explorer:** On the left, it shows a project named "HelloGlassFish" with the following structure:
  - Deployment Descriptor
  - Referenced Types
  - Java Resources: src
  - JavaScript Resources
  - build
  - WebContent
    - META-INF
    - WEB-INF
      - lib
      - sun-web.xml
    - index.jsp
- Editor Tabs:** At the top, there are tabs for "index.jsp" and "HelloServlet.java".
- Code Editor:** The main area displays Java code. In "HelloServlet.java", the code includes:

```
package server;

import java.io.IOException;
/*
 * Servlet implementation class HelloServlet
 */
@WebServlet("/HelloServlet")
@javax.servlet.annotation.WebServlet
@Target(value={TYPE})
@Retention(value=RUNTIME)
@Documented
```
- JavaDoc Preview:** A yellow tooltip is displayed over the `@WebServlet` annotation, providing detailed documentation:
  - Annotation used to declare a servlet.**
  - This annotation is processed by the container at deployment time, and the corresponding servlet made available at the specified URL patterns.
  - Since:** (with a date field)
- Toolbars and Buttons:** Standard Java IDE toolbars are visible along the bottom of the code editor.

New

## Select a wizard

Create a new EJB 3.x Session Bean

Wizards:

ejb

x

- ▼ EJB
  - EJB Project
  - Entity Bean (WebLogic EJBG)
  - Message-Driven Bean (EJB 3.x)
  - Message-Driven Bean (WebLogic EJBG)
  - Session Bean (EJB 3.x) **(Selected)**
  - Session Bean (WebLogic EJBG)
- ▼ GlassFish
  - EJB Timer (Java EE 6)
- ▼ WebLogic Configuration Files
  - WebLogic EJB Module Descriptor

ORACLE

# EJB-in-a-WAR

The screenshot shows a Java code editor with the following code:

```
/*
@WebServlet("/HelloServlet")
public class HelloServlet extends HttpServlet {
    private static final long serialVersionUID = 1L;

    @EJB HelloBean bean;
    ...
}
```

A red circle highlights the `@EJB` annotation on the line `@EJB HelloBean bean;`. A context menu is open at this location, listing the following options:

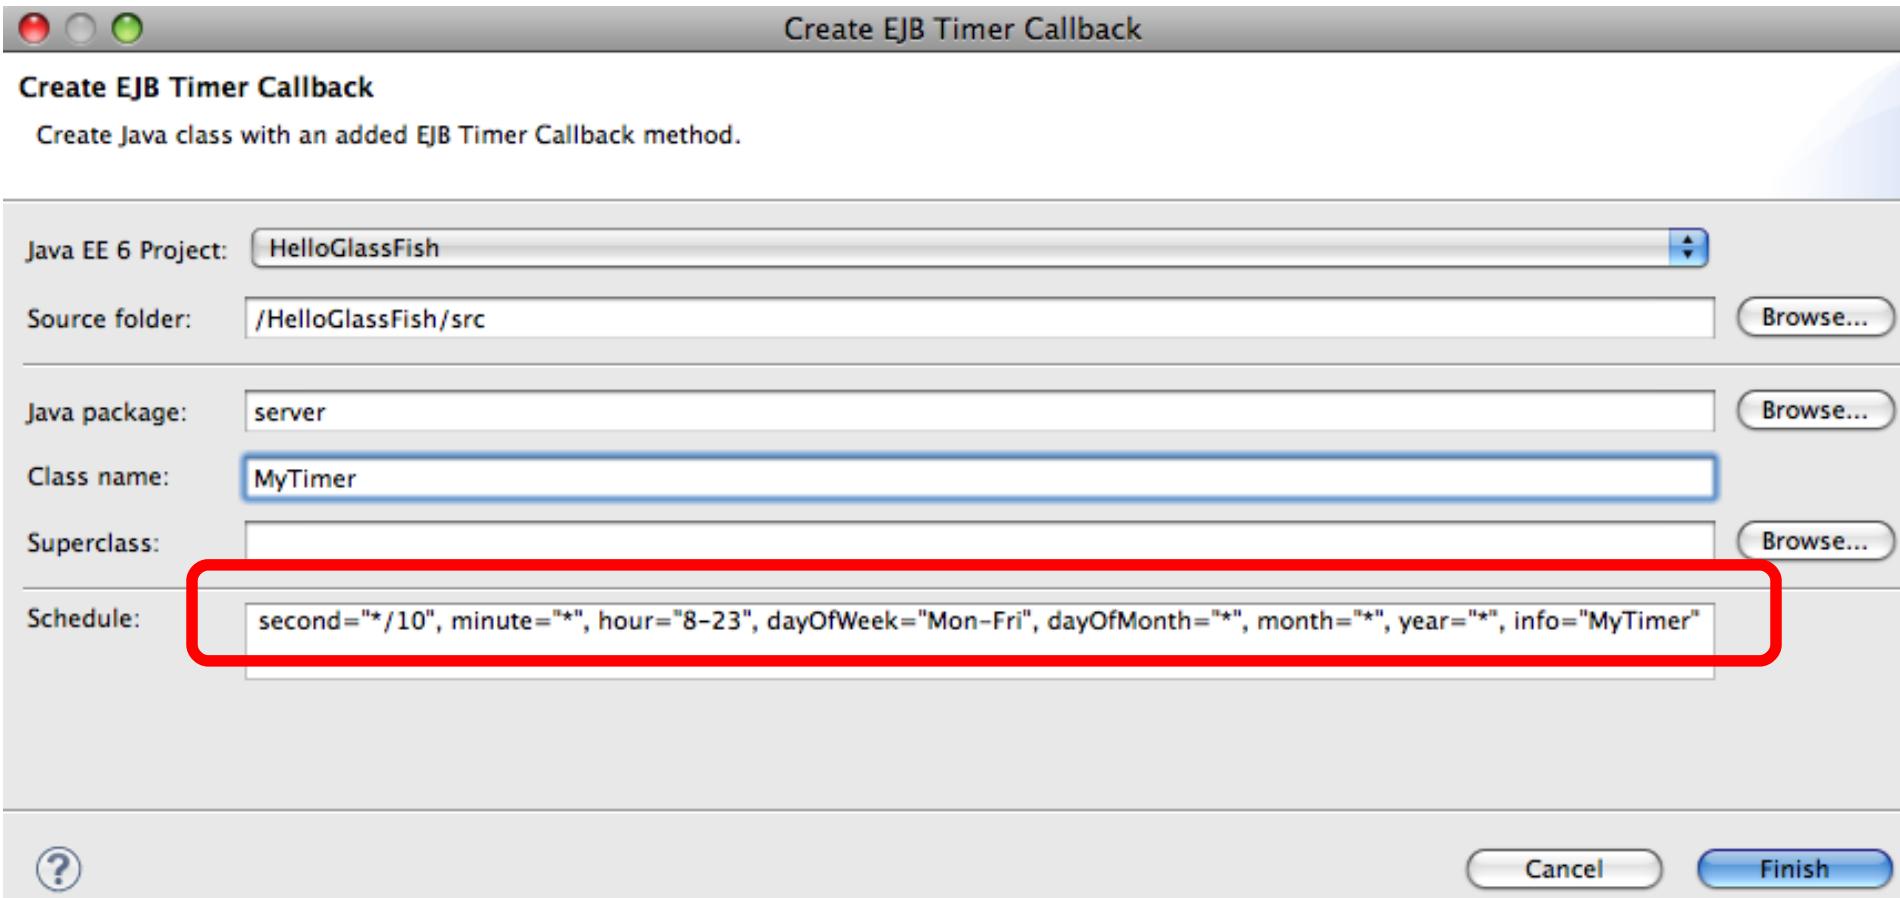

- Import 'EJB' (javax.ejb)
- Create annotation 'EJB'
- Change to 'EJBs' (javax.ejb)
- Rename in file (⌘2 R)
- Fix project setup...

The right pane shows the generated imports:

```
import java.io.IOException;
import javax.ejb.EJB;
import javax.servlet.ServletException;
import javax.servlet.annotation.WebServlet;
...
```

At the bottom of the code editor, there is a status bar with the text "Press 'Tab' from proposal table or click for focus".

# Cron-like Syntax for EJB Timer

The screenshot shows the Data Source Explorer and SQL Scrapbook interface. The Data Source Explorer on the left displays database connections, including 'Sample JavaDB Database (Apache Derby)' and 'sun-appserv-samples'. The 'Tables' node under 'sun-appserv-samples' is highlighted with a red box. The SQL Scrapbook on the right shows a connection profile for 'Derby\_10.x' named 'Sample JavaDB' connected to 'sun-appserv'. A red box highlights the 'Database' dropdown set to 'sun-appserv'. The SQL editor contains the creation of a table 'myuser' with columns 'NAME' and 'PASSWORD'. The SQL Results tab shows the successful execution of the query.

# Pre-configured JDBC Resource

## JPA Facet

Library configuration is disabled. The user may need to configure further classpath changes later.

## Platform

EclipseLink 2.0.x

## JPA implementation

Type: Disable Library Configuration

The JPA facet requires a JPA implementation library to be present on the project classpath. By disabling library configuration, the user takes on the responsibility of ensuring that the classpath is configured appropriately via alternate means.

## Connection

Sample JavaDB Database

[Add connection ...](#)

[Connect](#)

Add driver library to build path

Driver: DerbyForSampleDB

Override default catalog from connection

Catalog:

Override default schema from connection

Schema: APP

## Persistent class management

Discover annotated classes automatically

Annotated classes must be listed in persistence.xml

Create mapping file (orm.xml)

## Select Tables

Select tables to generate entities from.

Connection: Sample JavaDB Database

(Note: You must have an active connection to select schema.)

# Facelets using JSF 2.0

## Select XHTML Template

Select a template as initial content in the XHTML page.

Use HTML Template

### Templates:

Name	Description
New Facelet Composition Page	Creates a new Facelet page for use with a template
New Facelet Footer	Creates a footer for use with the Facelet template
New Facelet Header	Creates a header for use with the Facelet template
<b>New Facelet Template</b>	<b>Creates a basic header/content/footer Facelet</b>
New XHTML File (1.0 frameset)	xhtml 1.0 frameset
New XHTML File (1.0 strict)	xhtml 1.0 strict
New XHTML File (1.0 transitional)	xhtml 1.0 transitional

### Preview:

```
<body>

<div id="header">
    <ui:insert name="header">
        Header area. See comments below this line in the source.
        <!-- include your header file or uncomment the include below
        <!-- <ui:include src="header.xhtml"/> -->
    </ui:insert>
</div>
```

Templates are 'New HTML' templates found in the [HTML Templates](#) preference page.

ORACLE®

The screenshot shows the Oracle JDeveloper IDE interface. At the top, there are tabs for HelloServlet.java, template.xhtml, input.xhtml, Default title, UserBean.java, and a blank page icon. Below the tabs, the main area displays a user interface design and its corresponding XHTML code.

**User Interface Design:**

Name:	<input type="text" value="#{userBean.name}"/>
Password:	<input type="password" value="#{userBean.password}"/>
<input type="button" value="submit"/>	

**XHTML Code:**

```
<ui:composition template="./template.xhtml">
    <ui:define name="content">
        <h:form>
            <h:panelGrid columns="2">
                <h:outputText value="Name:"/>
                <h:inputText value="#{userBean.name}" title="name"
                             id="name" required="true"/>
                <h:outputText value="Password:"/>
                <h:inputText value="#{userBean.password}" title="password"
                             id="password" required="true"/>
            </h:panelGrid>
            <h:commandButton action="show" value="submit"/>
        </h:form>
    </ui:define>
```

**Toolbars and Status Bar:**
