Element Types:

“ The domain-specific concepts that can be displayed, created, modified and destroyed as logical elements in a GMF application are described using element types. “

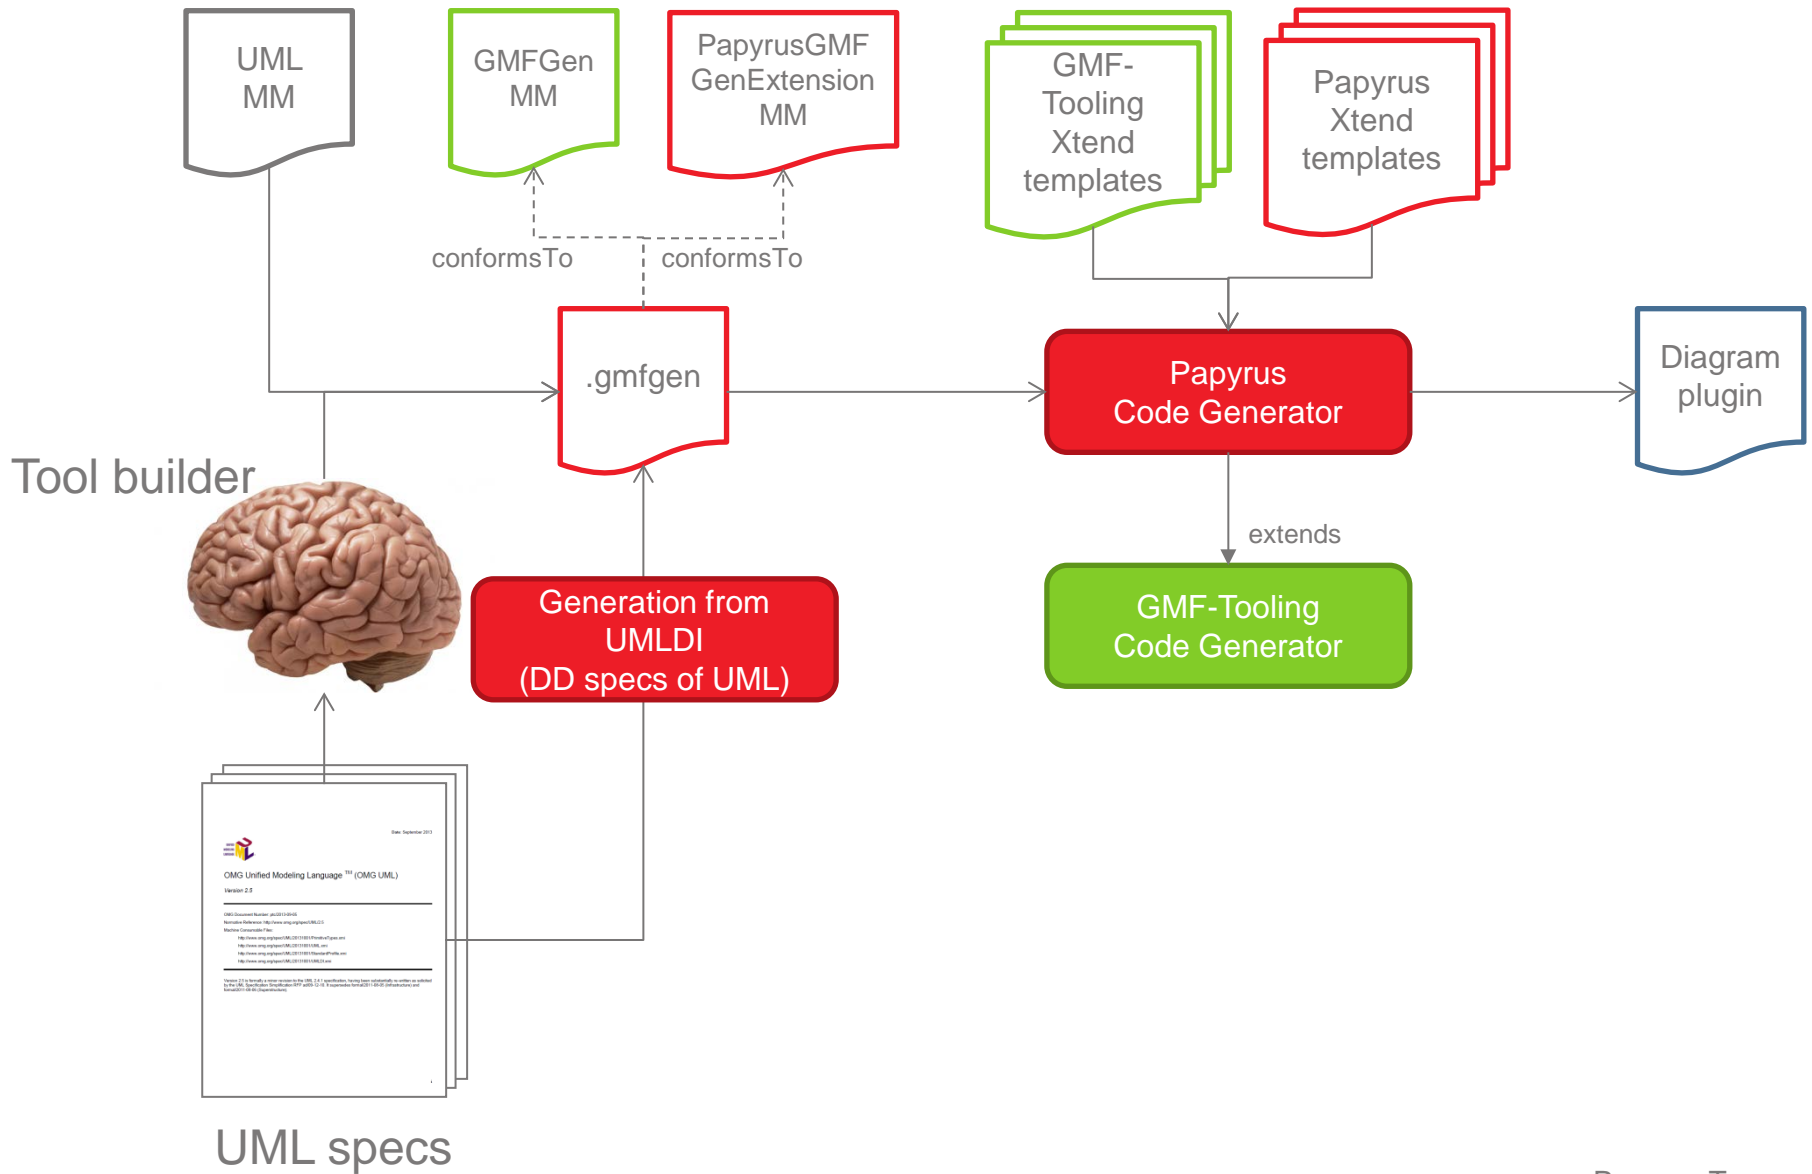

- **Very soon (probably Mars M3)**
 - ElementTypesConfiguration Framework as such
 - Migrated UML Service Types
 - Migrated SysML Service Types
 - Migrated Usecase diagram
- **Before Mars release**
 - All UML diagrams will be migrated to ElementTypesConfiguration

DIAGRAM DEFINITION

- **Papyrus provides the reference implementation of DD**
 - Implementation of DC metamodel
 - Implementation of DI metamodel
 - Implementation of DG metamodel
 - Implementation of a SVG renderer of DG models
- **Papyrus provides the reference implementation of UMLDI**
 - Implementation of the extension of DI for UML
 - Implementation of the transformation of UMLDI to DG (in QVTo)
- **Papyrus Class diagrams can be exported to standard UMLDI**
