

Aperi Launch In Context CIM Model

2008/04/02

Requirements

- Represent LIC points with meta-data to explain how to establish launch (e.g., SSO, context, parameters, etc.)
- Link LIC point to the management domain
- Provide concrete representation of LIC capabilities

LICCapabilities

- List of flags indicating the capabilities of the launch point; very similar to the StorageConfigurationCapabilities:
 - SupportedSynchronousActions[] and SupportedAsynchronousActions[]
 - (e.g., Storage Pool Creation, Storage Pool Deletion, Storage Pool Modification, etc.).

LICDescriptor

- TBD – Dave?

Questions/Issues

- Do we really need the link to the registered profiles? Or is the LICCapabilities enough?
- Should we register LICs through SLP?
