

EclipseRT Virgo & OSGi

By Christopher Frost

Agenda

- What is OSGi & OSGi basics
- Gemini & Virgo at Eclipse
- A tour of Virgo
- Current Status
- How can I get started?

Bundles Bundles Bundles

- OSGi is a Module System
- Many adopters including a lot of Eclipse projects
- Defined by the OSGi Alliance
- A Bundle, a Jar file, a single module
- The Bundle Manifest defines the imports/exports

Services

- A Bundle can export and consume services
- This happens dynamically at runtime
- Managed by a Service Registry
- A service is a Java Object with some properties
- The Whiteboard pattern

What is Virgo?

- “Dynamic Enterprise Application Platform”
- Based on SpringSource dm Server 2.0
- Objectives:
 - Better OSGi platform
 - Servlets & Migration of Java EE apps
 - Modular and extensible

What is Gemini?

- “Enterprise Modules Project”
- A collection of OSGi spec implementations
- Aims to provide a single authoritative collection
- Main contributors are SpringSource and Oracle

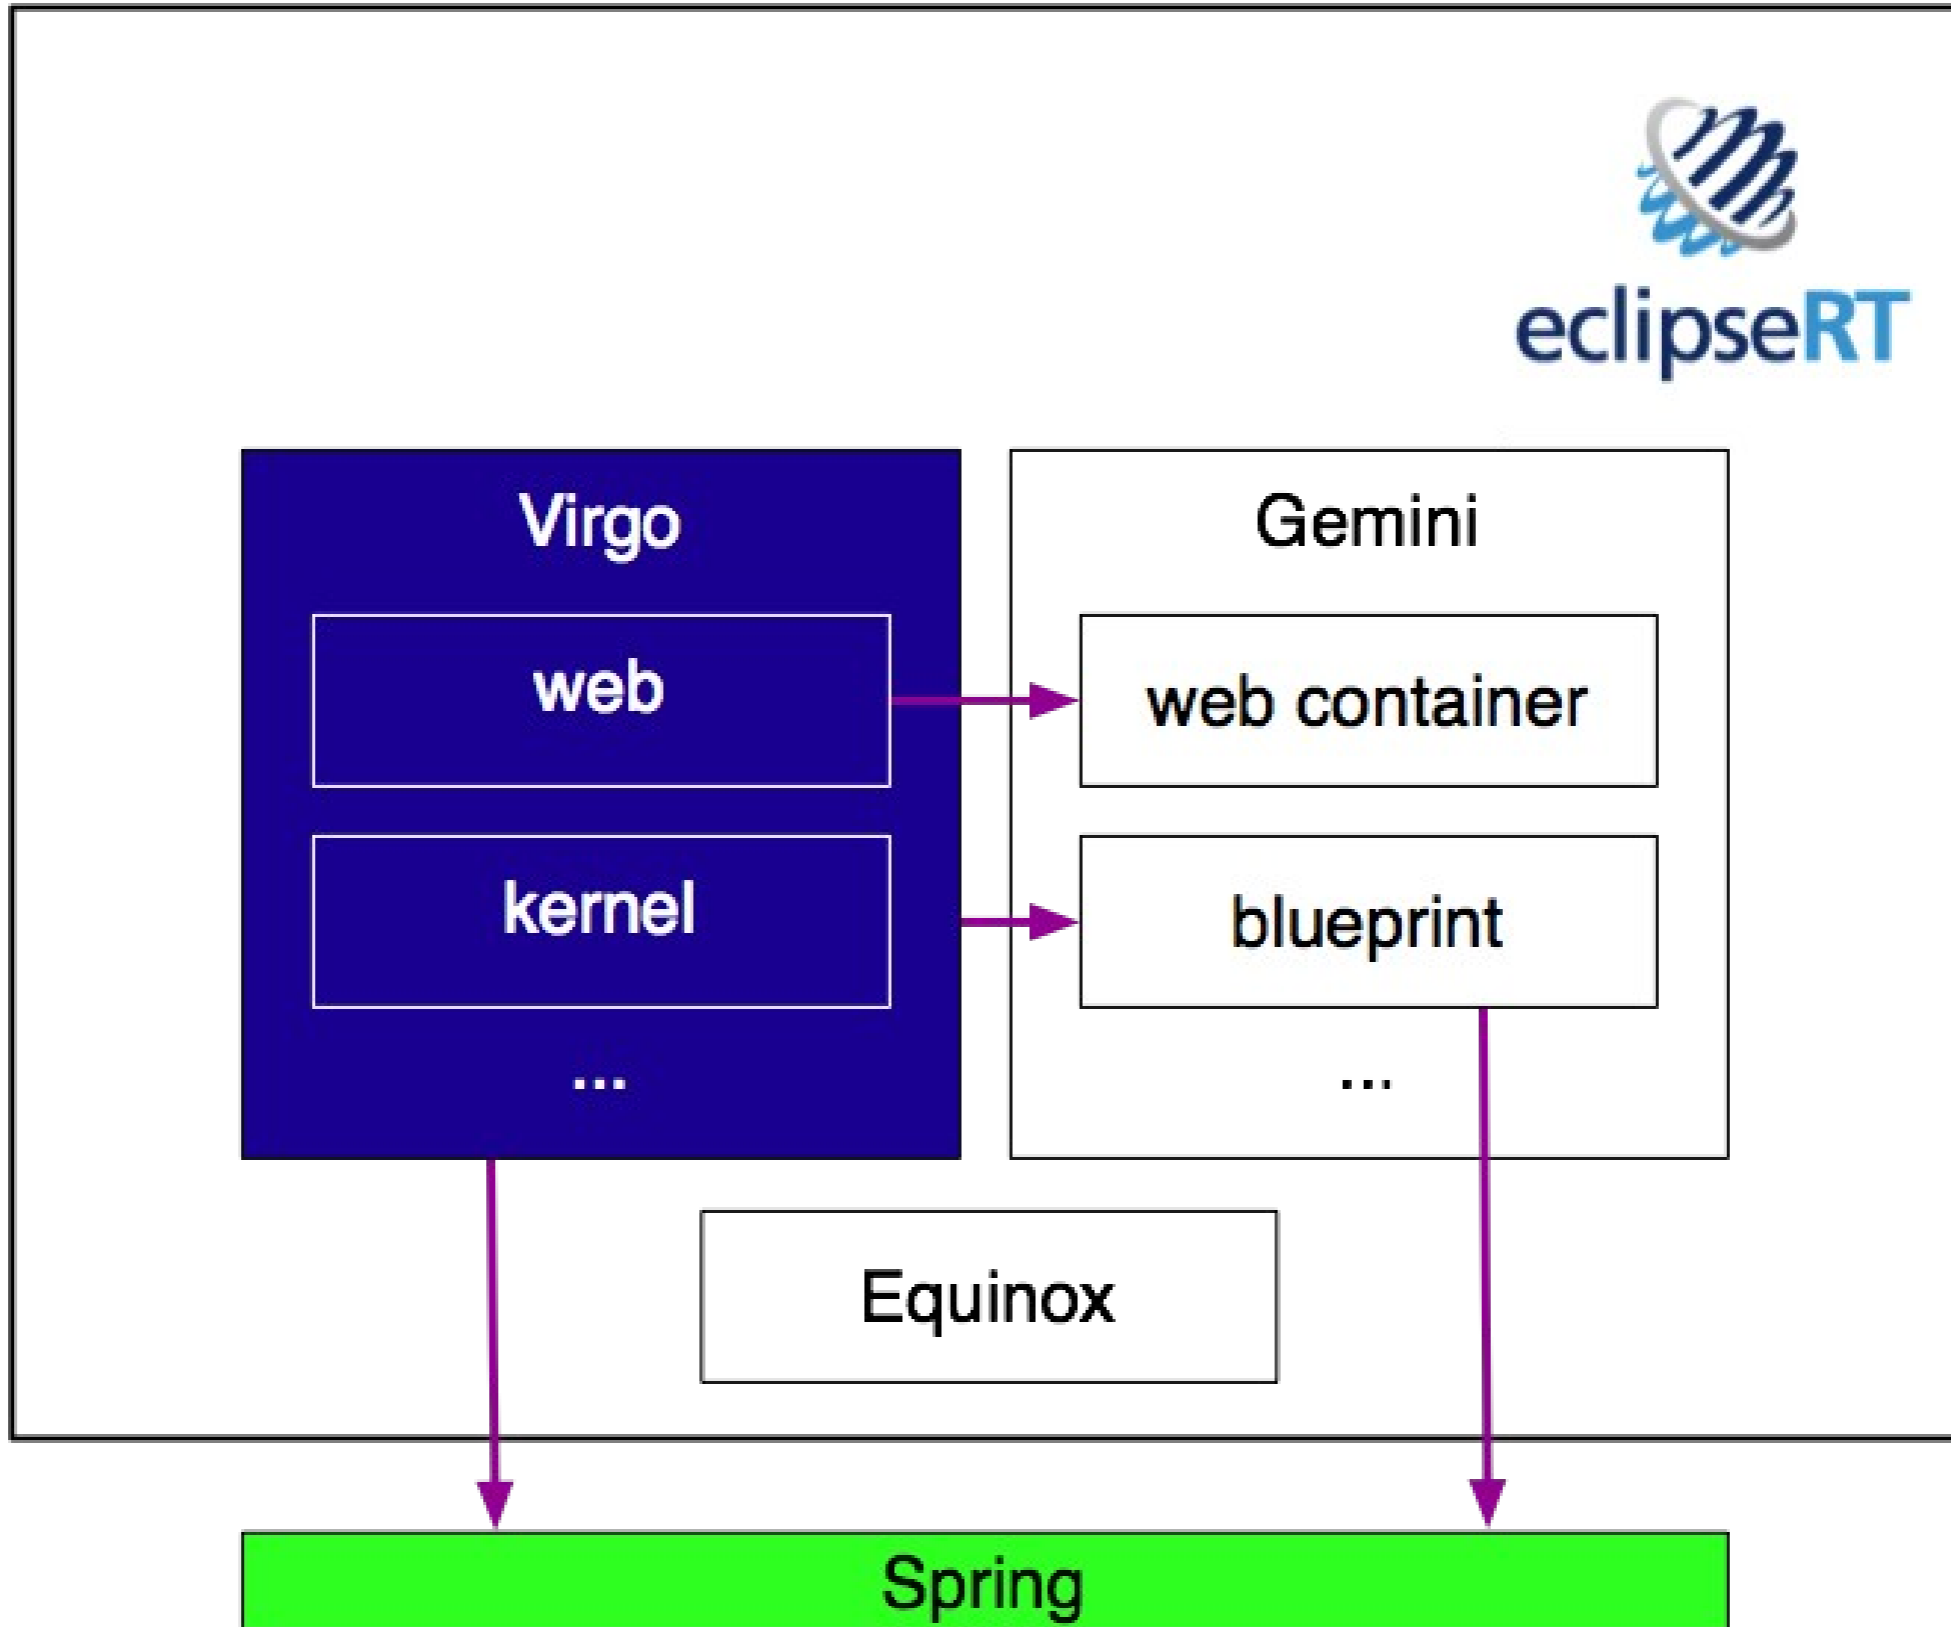

Problems Virgo Solves

- Groups bundles into manageable units
- Enables the use of existing open source libraries
 - TCCL, LTW, implicit package use
- Provisions from repositories
- Extensive diagnostics
 - resolution failure, deadlock, delayed services

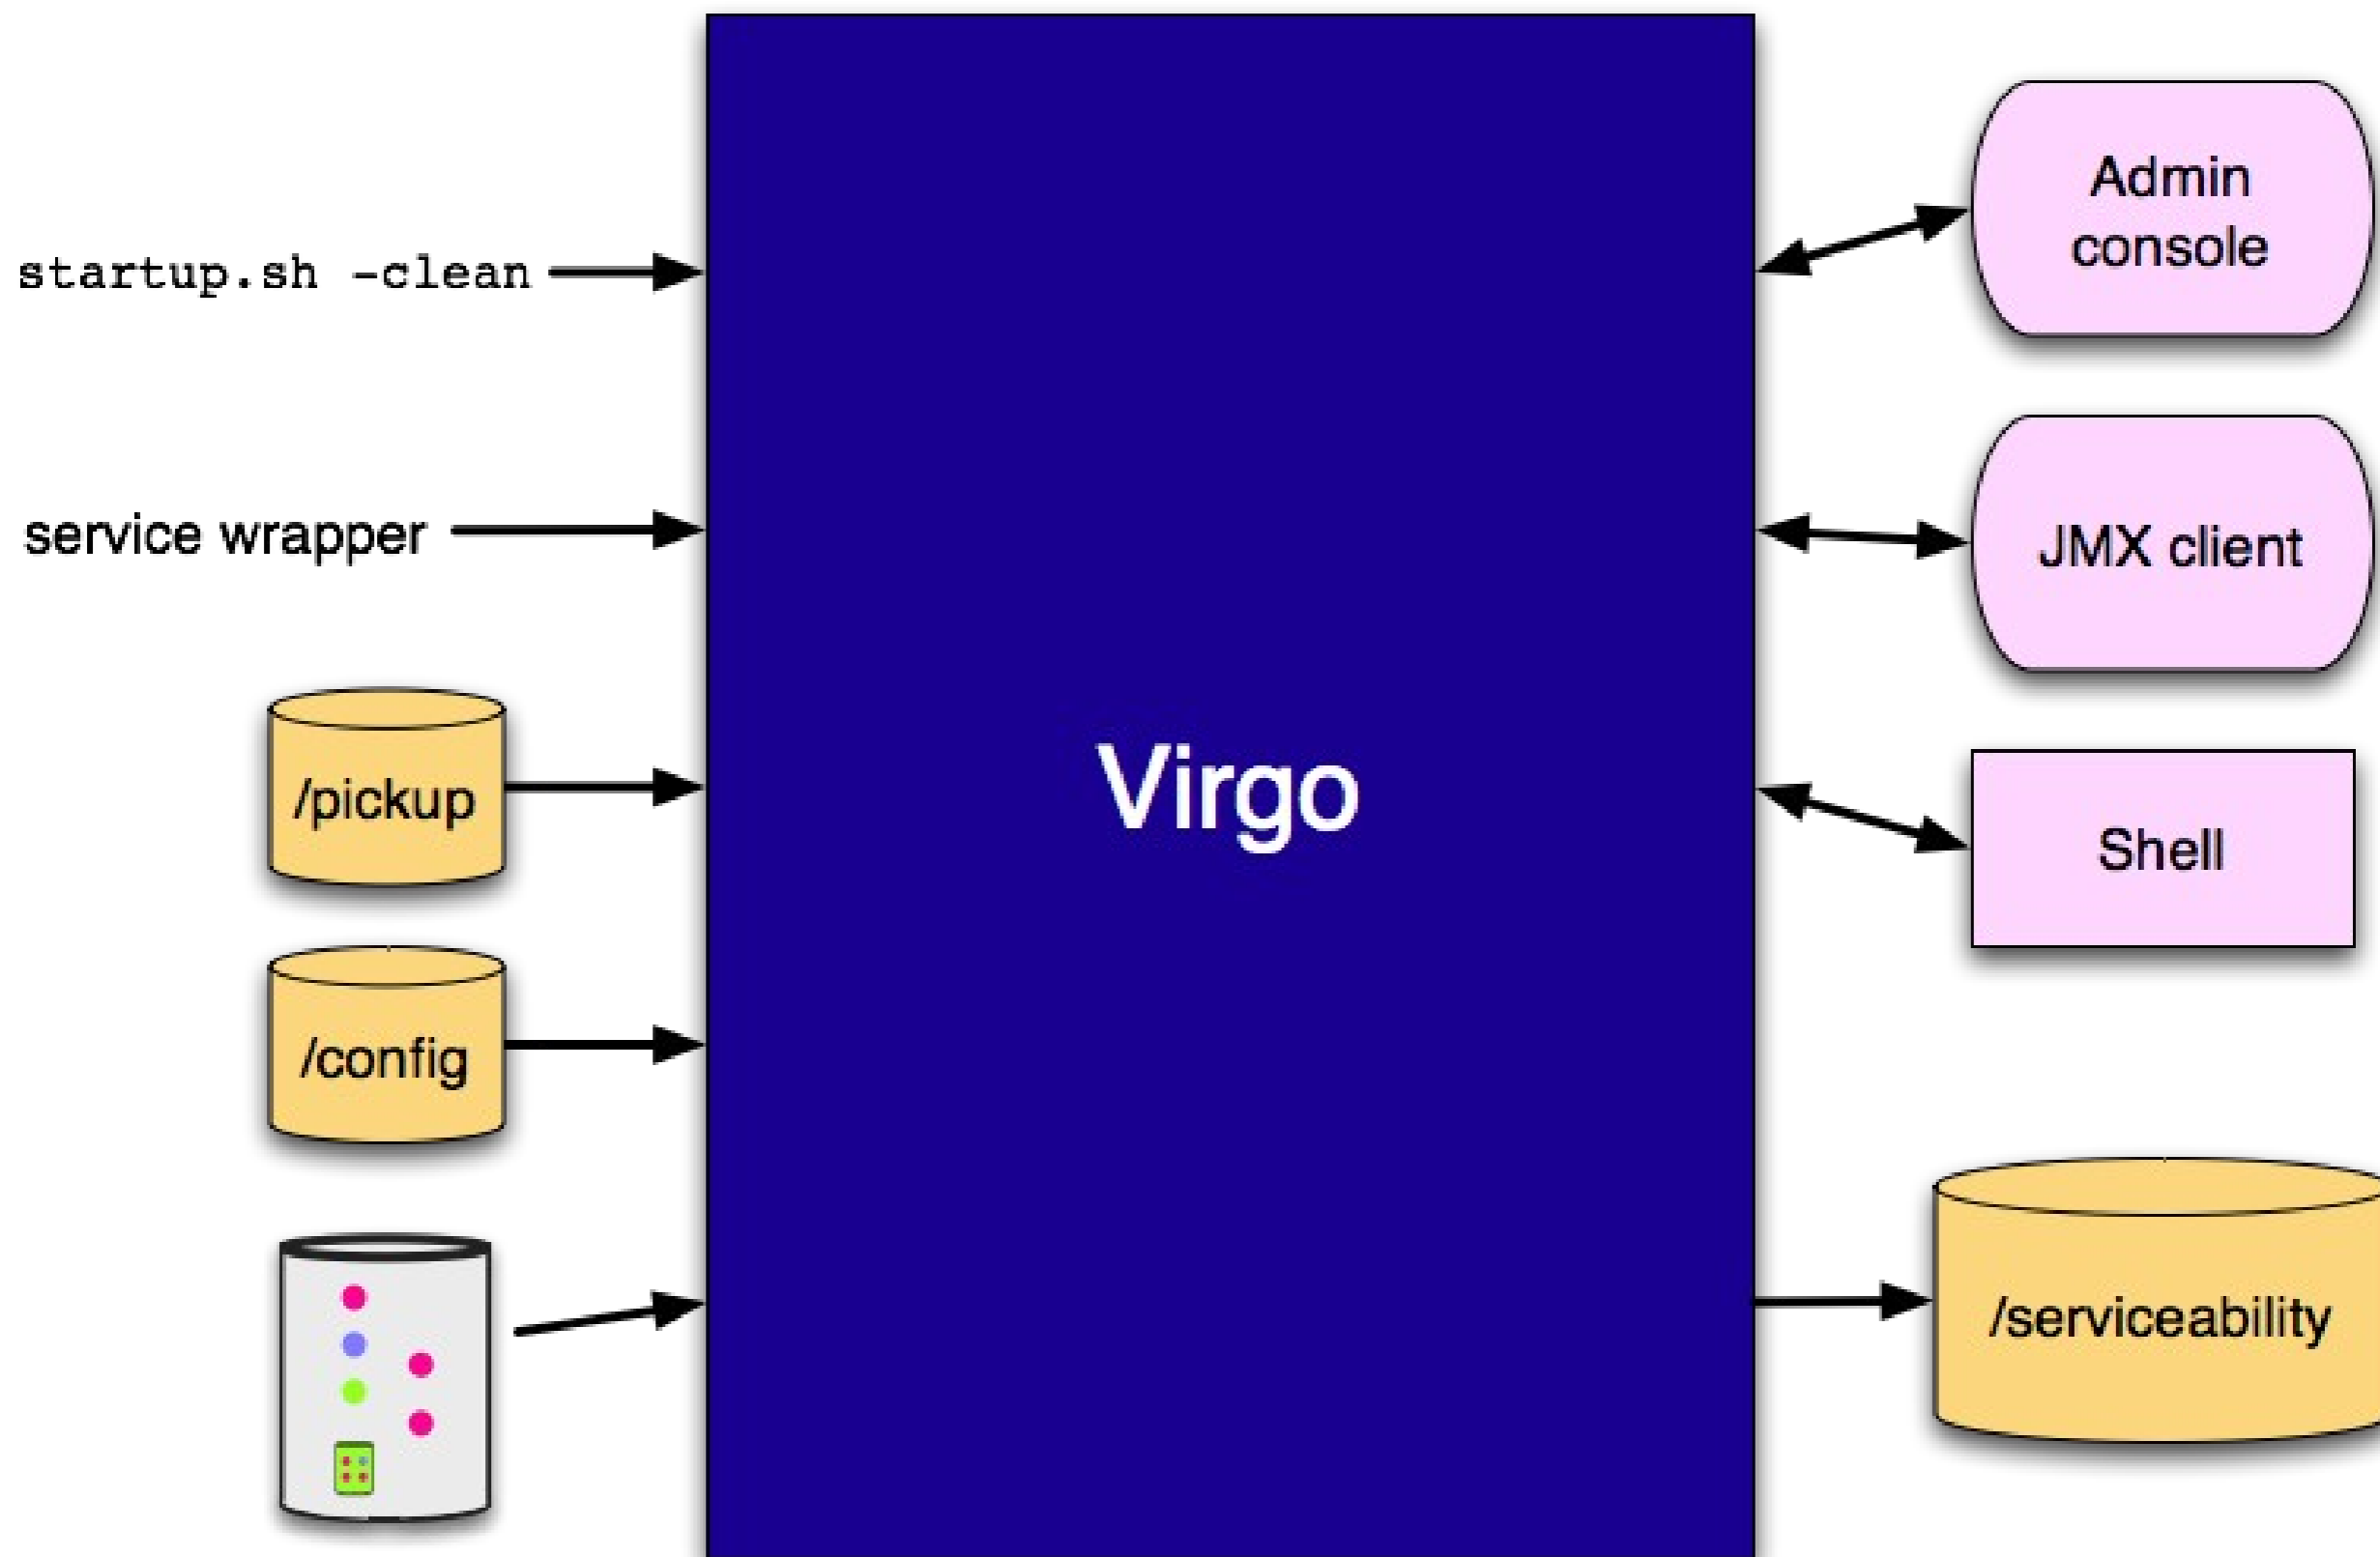

Virgo and EclipseRT

Virgo Externals

Artifacts

- Identified by type, name, version

- Types:

- bundle - OSGi bundle ●

- configuration - properties file ●

- plan - list of artifacts ●

- par – container of artifacts

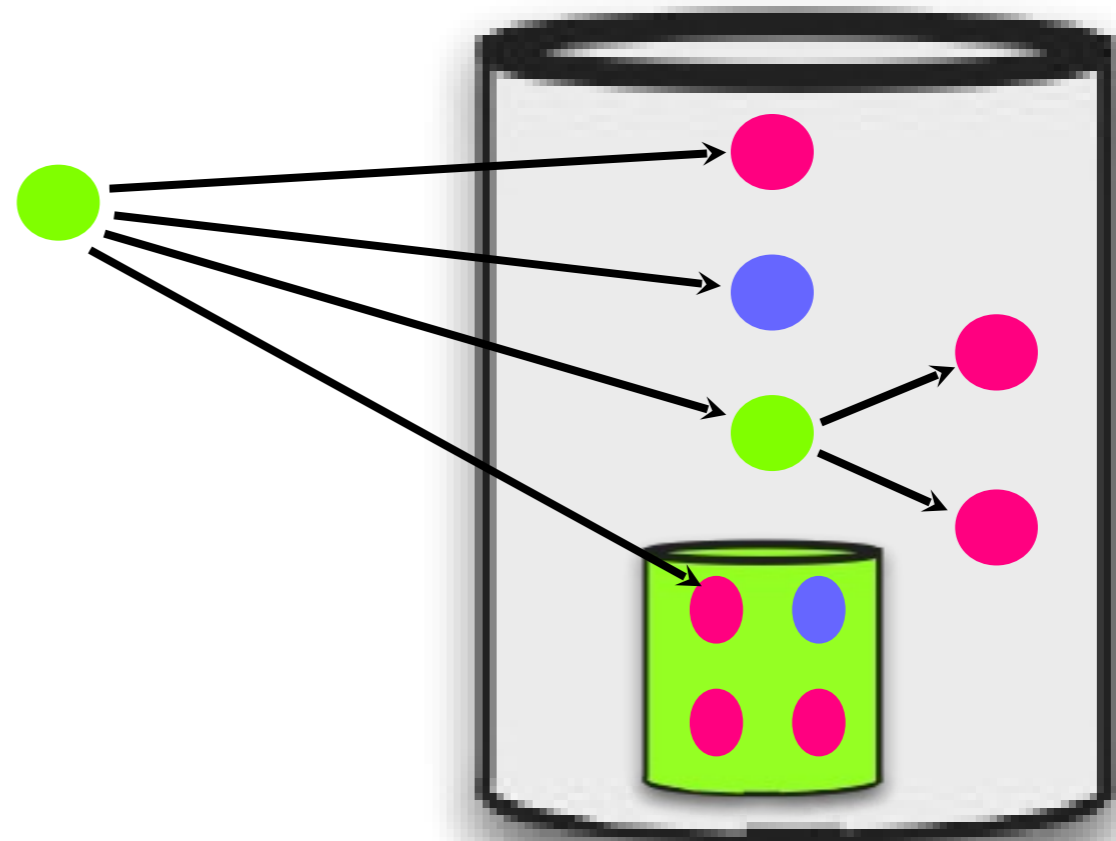

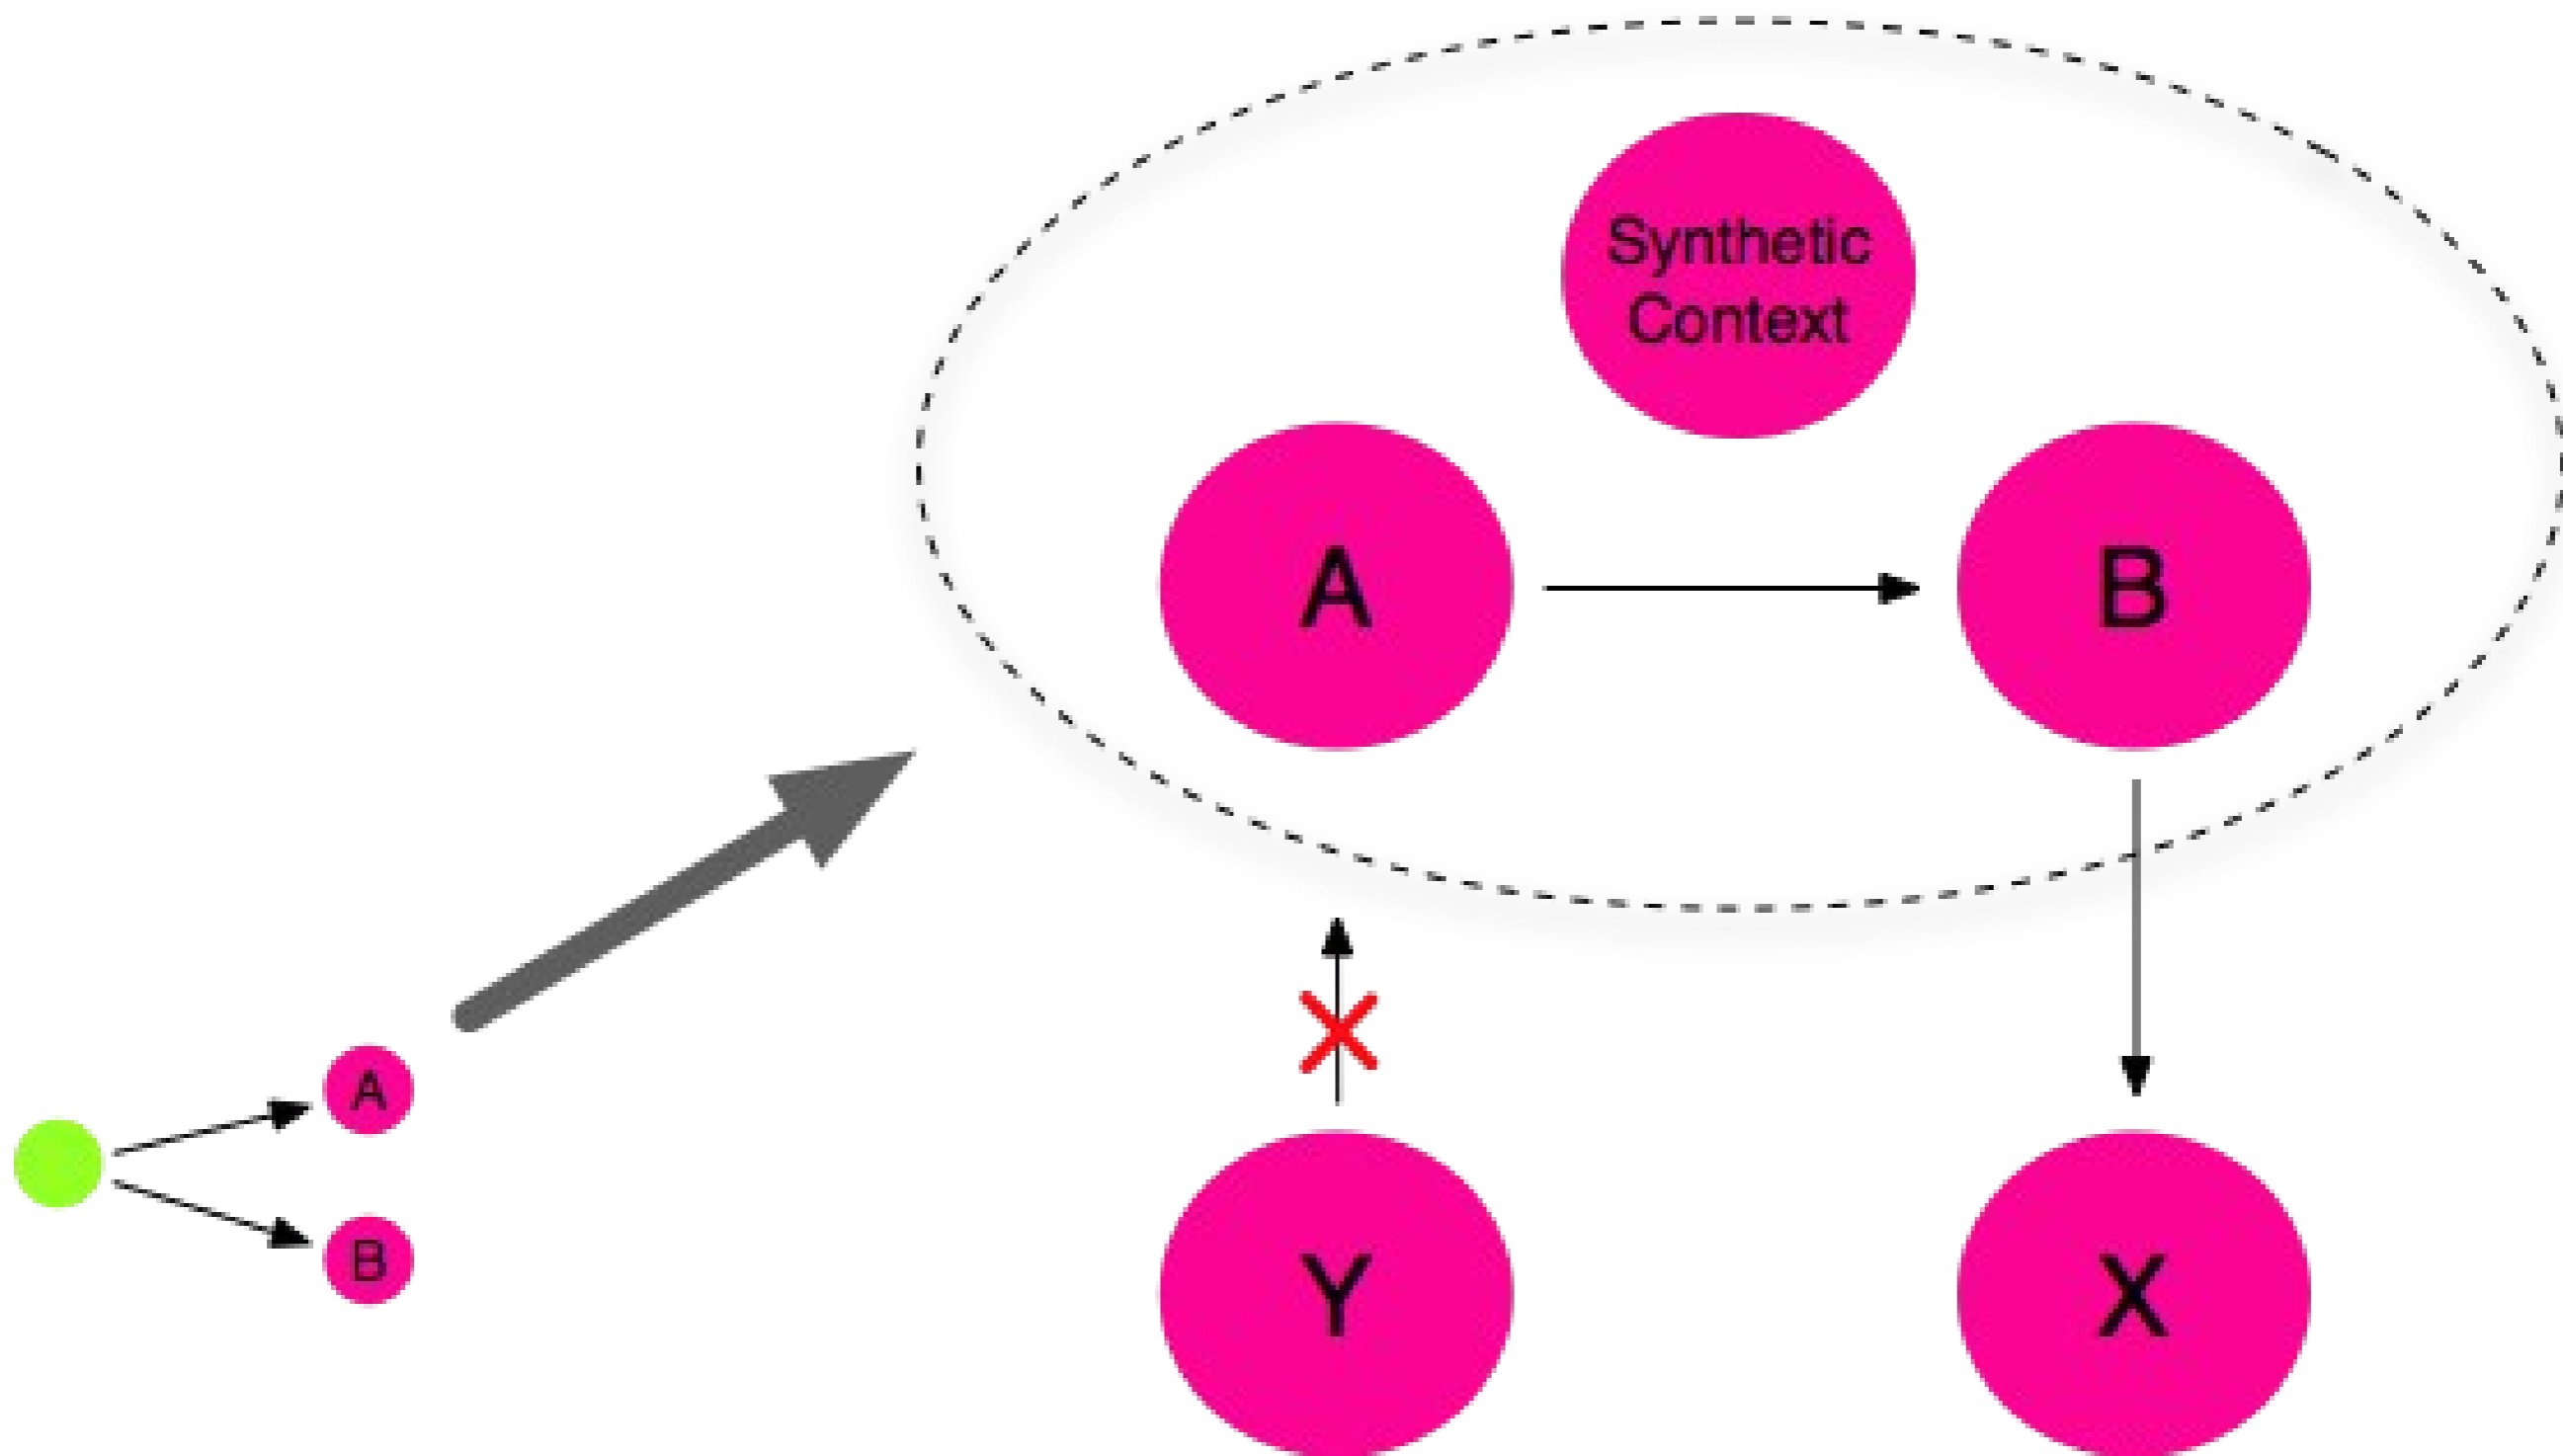

Plans

Plans

- XML
- List artifacts by type, name, version range
- Scoping
- Atomicity
- PARs
 - Contain artifacts
 - Scoped, atomic

Scoping

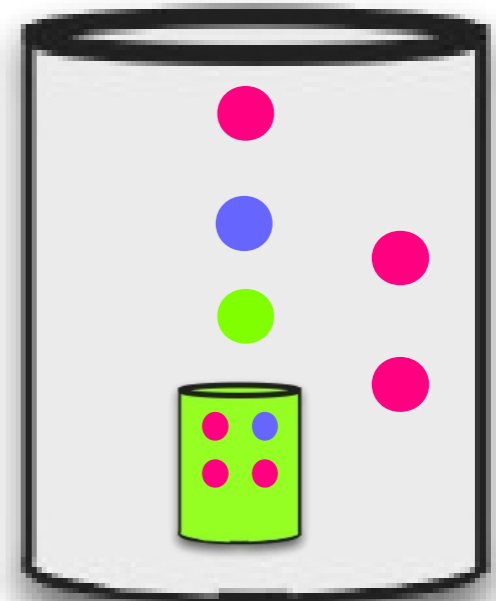

A white thought bubble with a black outline and a black line extending from its top-left corner. Inside the bubble, the word "Repositories" is written in a bold, black, sans-serif font.

Repositories

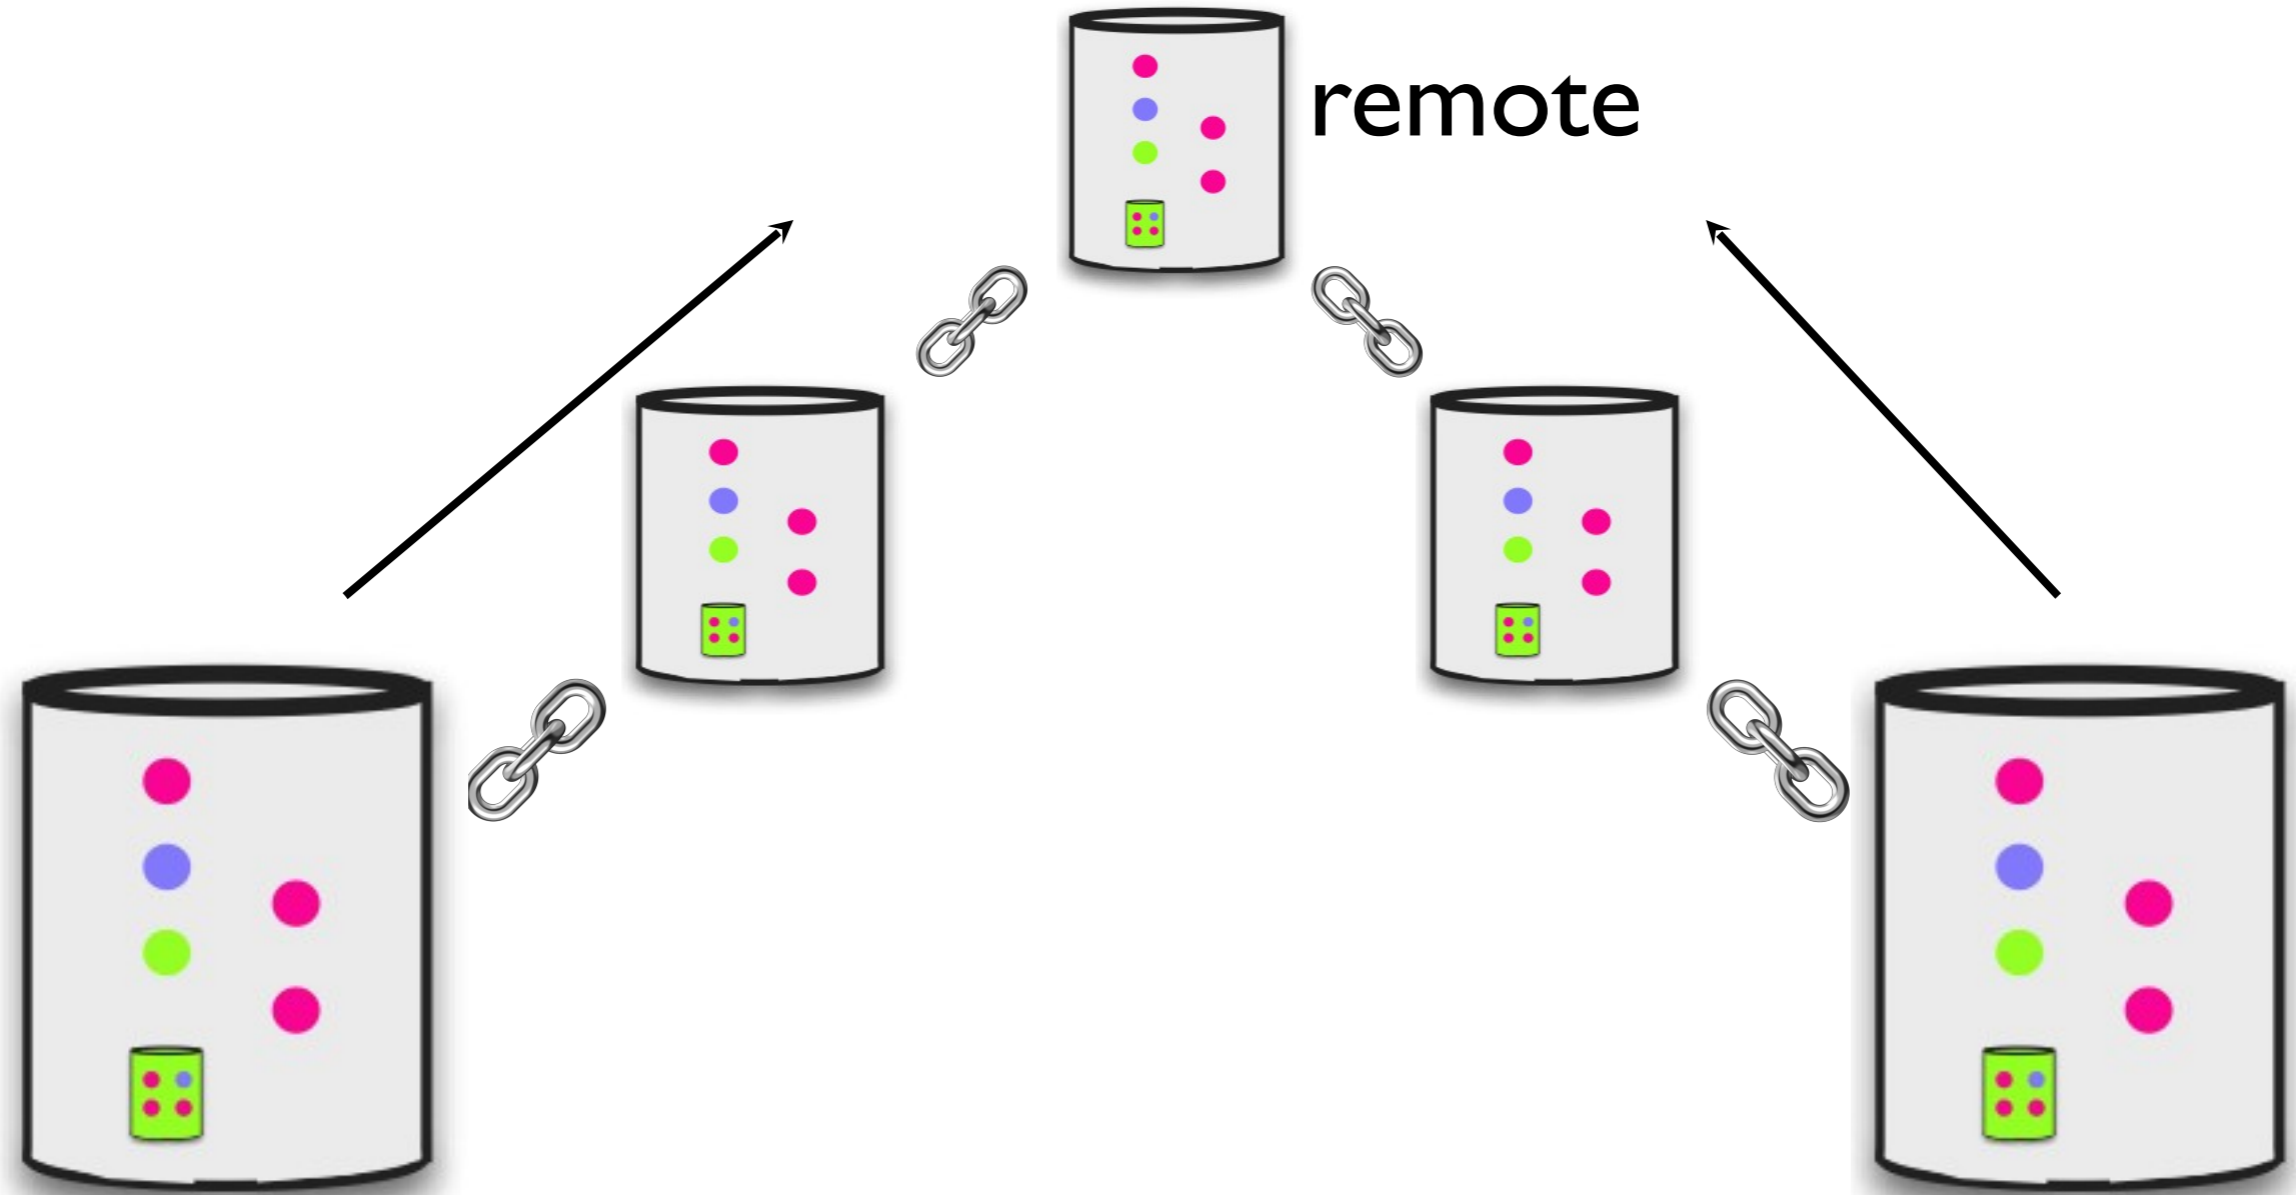

Repositories

- Artifacts indexed by type, name, version
- Supports queries e.g. by version range
- Repository types:
 - External
 - Watched
 - Remote
- Repositories may be chained

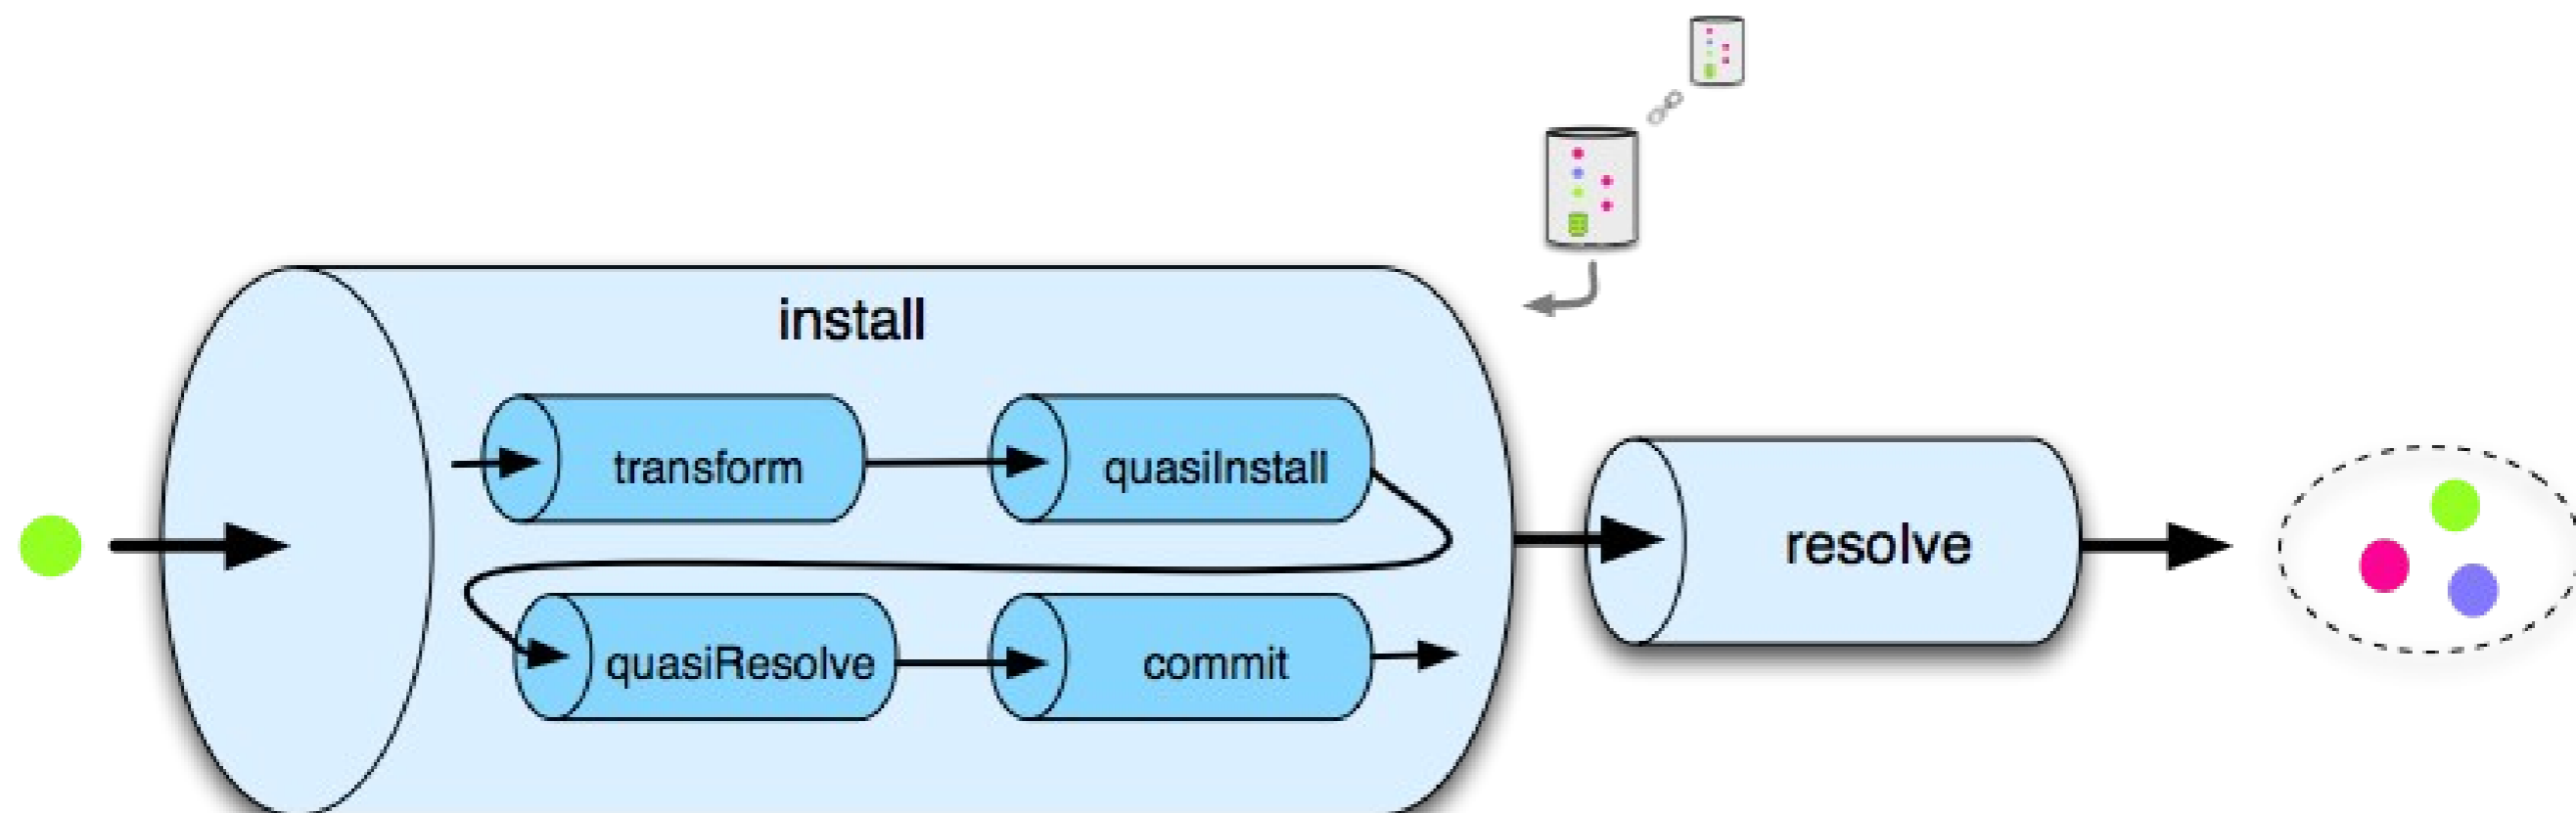

Repository Chaining

Pipelines

Regions

Regions

How can I get started?

Getting Started

- Tech Demo later today (5)
- Pre-req: Java 6
- Download & unzip
- bin/startup.sh or bin\startup.bat
- drop WAR files or bundles into pickup dir

Then What?

- Read documentation
 - User Guide
 - Programmer Guide
 - Getting Started Guide
- Join the community
- <http://wiki.eclipse.org/Virgo/Community>

Roles

- Casual user
- Expert user
- Contributor
- Committer

Committer Skills

- Know or willing to learn:
 - Clean architecture & code
 - Unit and Integration testing
 - Concurrency
 - (Deep) OSGi understanding
 - git, ant, ivy, etc.

Work Areas

- Developer docs & wiki
- Jetty adapter
- Regions and nested frameworks
- p2 integration
- More server types

Current Status

- Adding the last code into Eclipse GIT
- IP scrutiny progressing well
- Most repos can be checked out and built
- Virgo Nightly Builds available
- Baseline release is coming soon

Further Information

- <http://www.eclipse.org/virgo>
- <http://wiki.eclipse.org/Virgo/Community>
- #VirgoRT 
- Download dm Server 2.0.2 and try it out
- <http://www.springsource.org/dmserver>
