

openMDM Architecture Committee

Meeting Notes: 2020-01-10

Author: Stefan Ebeling

Attendees

The following members were present:

- Matthias Ebeling (Daimler AG)
- Stefan Ebeling (BMW AG)
- David Schumm (Daimler AG)
- Stefan Wartini (Müller-BBM VibroAkustik Systeme GmbH)
- Angelika Wittek (openMDM Toolkit Manager)

Topics

Sparse Documentation (D. Schumm)

A documentation of the openMDM data model will be the most valuable one. The diagram built by formerly Gigatronik might be a good starting point. Two views will ease the distribution: A management view and more detailed technical one. The AC decided to start with the tech doc just because of being used to.

Angelika suggested to try out the Papyrus plugin as a UML modelling tool.

And she will clean up the Wiki (<https://wiki.eclipse.org/Open-Measured-Data-Management-WG>) and the Project Page (<https://projects.eclipse.org/projects/technology.mdmb1>):

- Update / enhance the content with the latest flyer.
- Delete dead links.
- Remove outdated information.
- Advertise the demo environment.
- Document most important features from an end users perspective.

Product management (A. Wittek)

Dev Team

The dev team is preparing a new branch for preparing the upcoming release. It will be available mid-February.

SC Meeting

We have enough budget for elongating the contracts with Peak and Angelika. Even an RfP for an additional developer is planned. Atos joined the openMDM EWG again.

In February / March a meeting is planned with openADx to define a working model. BMW, Bosch, Karakun, Peak and Siemens will participate in this meeting.

Next call

The next AC call is scheduled for February 14th 2020.
