

openMDM Architecture Committee

Meeting Notes: 2020-07-24

Author: Stefan Ebeling

Attendees

The following members were present:

- Stefan Ebeling (BMW AG)
- David Schumm (Daimler AG)
- Angelika Wittek (openMDM Toolkit Manager)

Topics

ODS IDL

ASAM licensed the ODS IDL version 5 to the openMDM Working Group. But Angelika managed to get a license for the Eclipse Foundation.

An enhanced license will be necessary for version 6.

Contributions

For future contributions it might be very helpful to include an additional task in tender offers: Integrate the contribution into the openMDM MASTER and a release. This requires an active committer from the provider.

Dev Team

Karakun has finished its tasks. A few hours are left in their contract. Peak is working on the Node Provider with only 6 days left. The estimations worked out in spring show that the Node Provider needs additional efforts for the storage of its configuration and a corresponding UI.

Angelika will compile an email with details about progress and expenses.

AC

The attendees of this call decided to cancel the recurrence call. We will wait for a decision from the SC how to proceed (expected end of September). Our suggestion is a call on a “when needed” basis.

Enjoy your summer vacation.
