In ~~good~~ documentation we trust...

```
/**
 * Rollsback the transaction if any and clears different lists to
 * start with an empty resource again.
 * Note that the super.doUnload is not called because that clears
 * the list resulting in all kinds of undesirable inverseremoves.
 */
@Override
protected void doUnload() {
    ...
}
```

No? Are you sure?

Generating high-quality API documentation

```
/**
 * The number of questions.
 */
private int numberOfQuestions;

/**
 * Sets the number of questions.
 *
 * @param numberOfQuestions the number of questions
 * @throws IllegalArgumentException the illegal argument exception
 */
public void setNumberOfQuestions(int numberOfQuestions)
    throws IllegalArgumentException {
    if (numberOfQuestions < 0) {
        throw new IllegalArgumentException("numberOfQuestions < 0");
    }
    this.numberOfQuestions = numberOfQuestions;
}
```

Generating ~~high-quality~~ API documentation

```
/**
 * The number of questions.
 */
private int numberOfQuestions;

/**
 * Sets the number of questions.
 *
 * @param numberOfQuestions the number of questions
 * @throws IllegalArgumentException the illegal argument exception
 */
public void setNumberOfQuestions(int numberOfQuestions)
    throws IllegalArgumentException {
    if (numberOfQuestions < 0) {
        throw new IllegalArgumentException("numberOfQuestions < 0");
    }
    this.numberOfQuestions = numberOfQuestions;
}
```

So what have we missed?

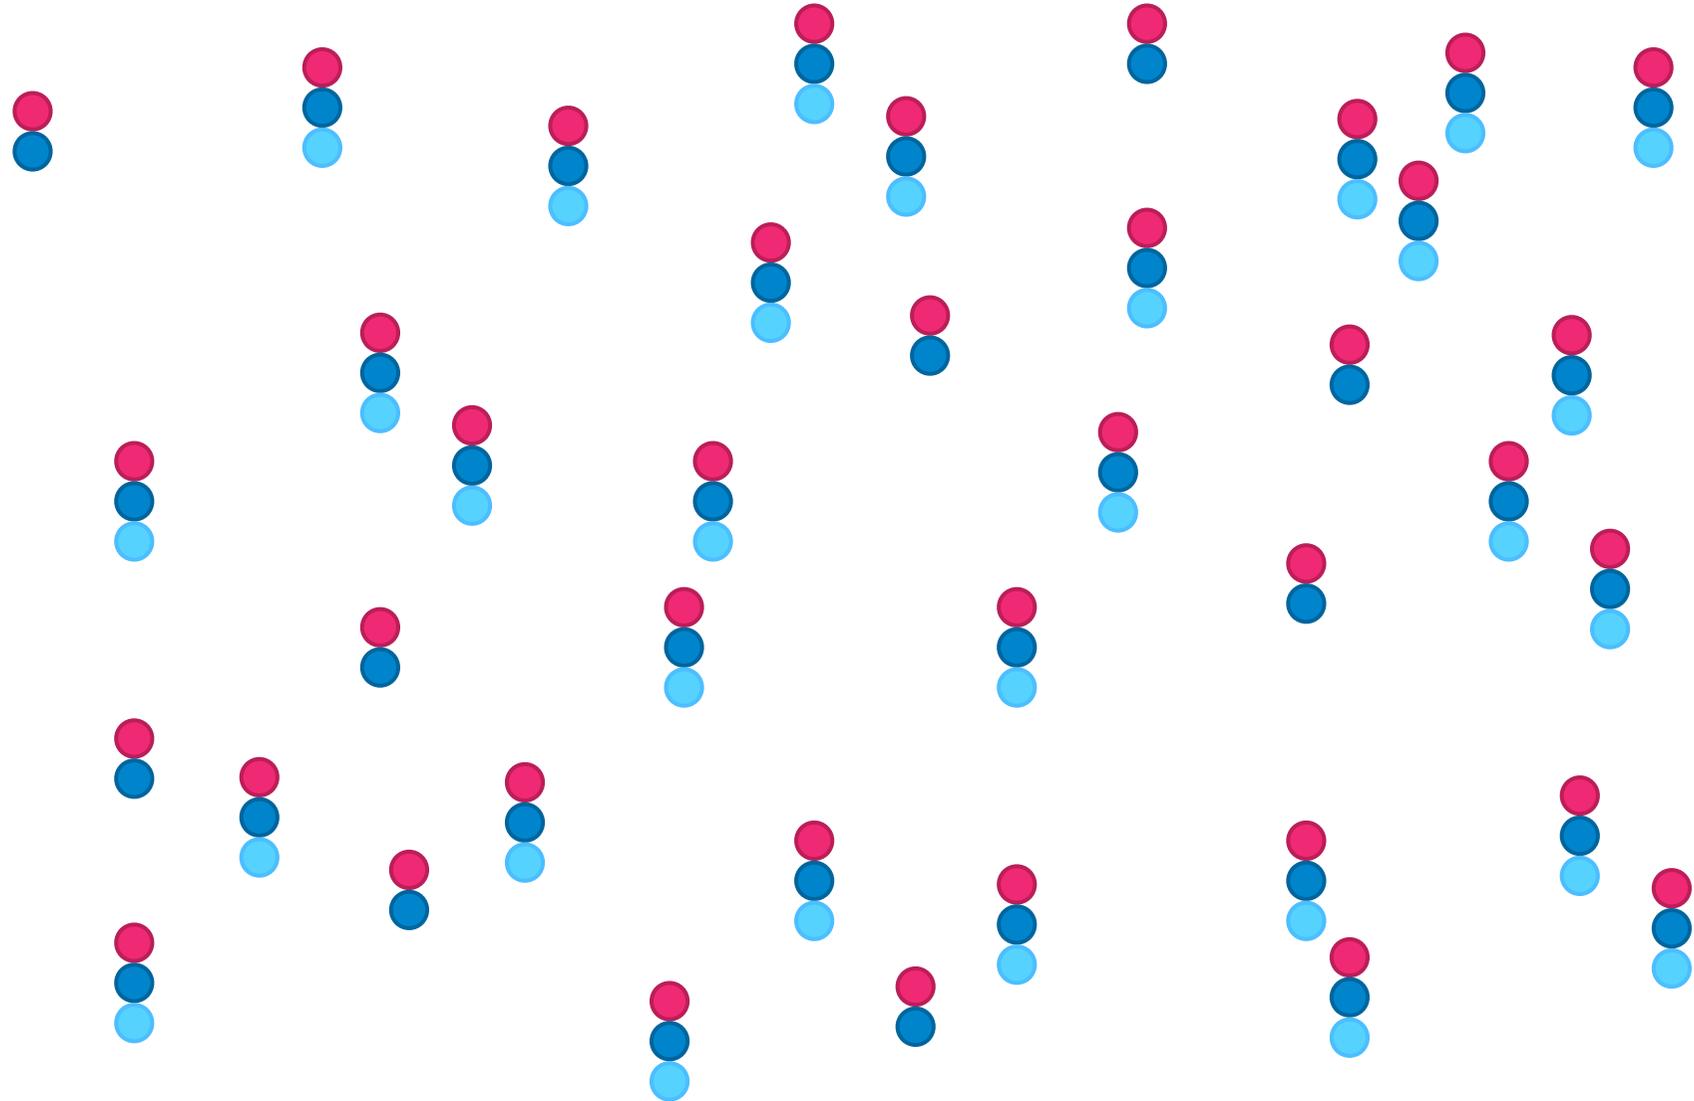

If all of your colleagues do it – why don't you?

How to detect such wrong uses?

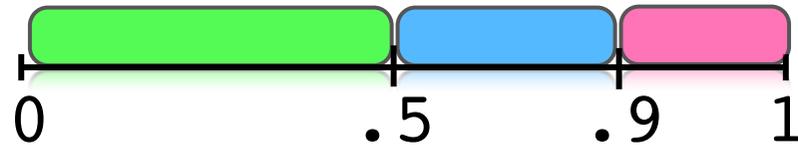

How to detect such wrong uses?

Just one formula...

$$\textit{strangeness}(x) = 1 - \frac{|E(x)|}{|E(x)| + |A(x)|}$$

x = {observed method calls on a variable}

E(x) = {*exact* similar usages for variables of type x in the code base}

A(x) = {*almost* similar usages, i.e., x+1 method call}

Missing Calls Detector in Eclipse

The screenshot shows the Eclipse IDE interface. The top editor window is titled `*MyWizardPage.java`. The code content is as follows:

```
package org.eclipse.recommenders.examples.demo;

import org.eclipse.jface.wizard.WizardPage;

public class MyWizardPage extends WizardPage {

    private Text text;

    @Override
    public void createControl(final Composite parent) {
```

A red arrow points to a warning icon in the left margin, which is circled in red. A tooltip message is displayed over the icon:

Usage of 'this' is fishy [95%]. Is 'this.setControl(Control)' missing?

In development...

Applied on Eclipse 3.5...

ECLIPSE CODE RECOMMENDERS

From IDE 1.0 to IDE 2.0

Leveraging your IDE's build environment

The image shows an IDE window with several panes and annotations:

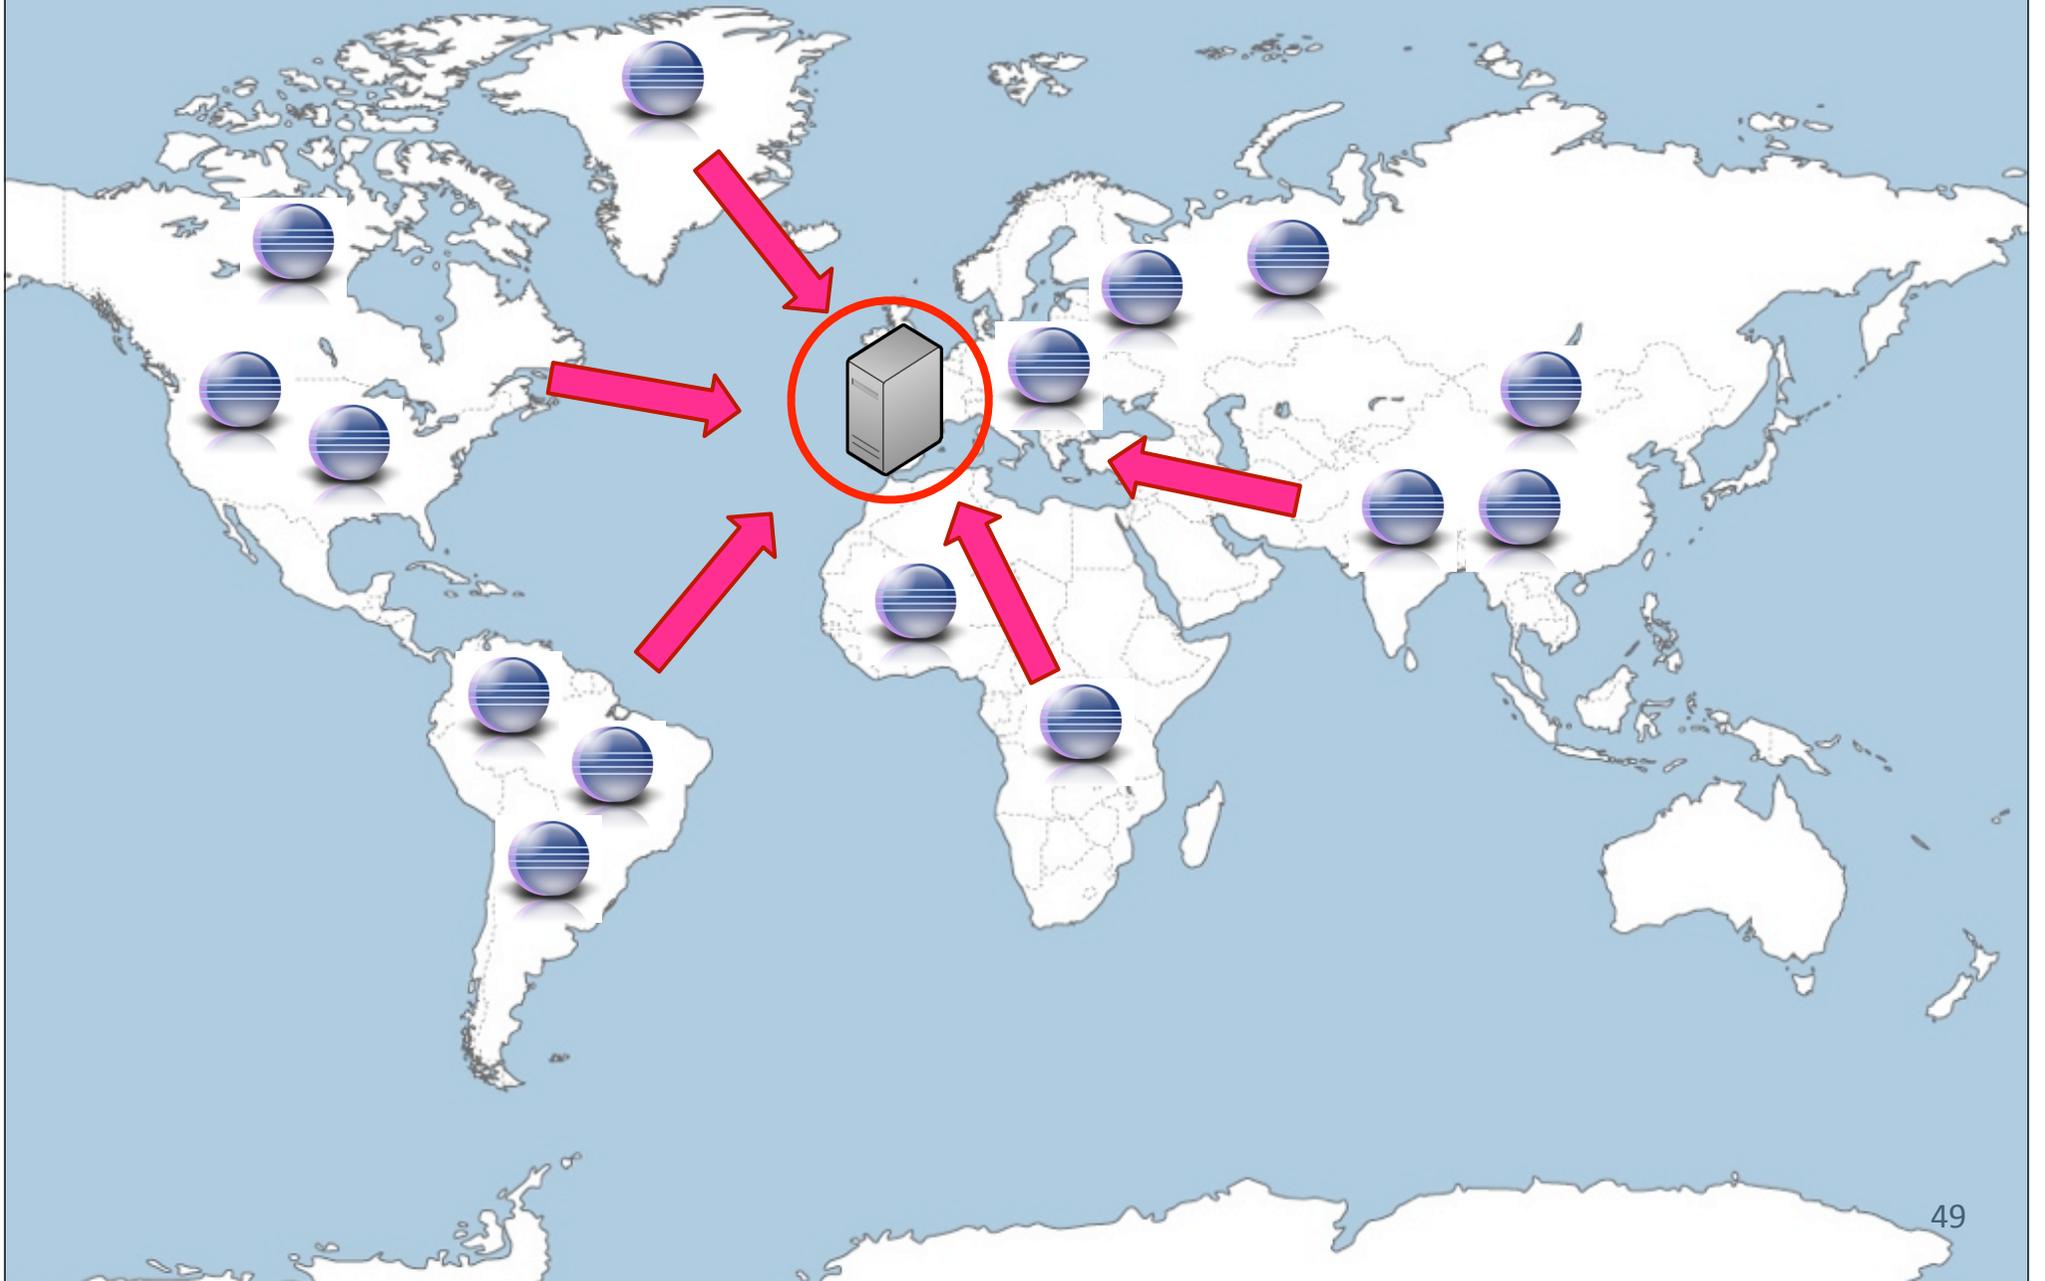

- Project Environment:** The Package Explorer on the left shows the project structure for `org.eclipse.recommenders.examples.demo`.
- Context:** The main editor shows the `MyDialog.java` file with the `createDialogArea` method.
- Object Usage:** A tooltip shows the `swtTextWidget` variable being used in the `return` statement.
- Selected Proposals:** A list of proposals is shown below the code, including `setLayoutData(Object layoutData) : void - Control - 93 %`.
- Click Feedback:** The ExtDoc pane shows a table of method recommendations based on 1084 implementations.
- Stacktraces:** The Console pane shows a stacktrace for an `InvalidThreadAccessException`.

Method	Frequency	Percentage
should call <code>createDialogArea(Composite)</code>	868 times	80%
rarely call <code>getShell()</code>	207 times	19%
rarely call <code>convertWidthInCharsToPixels(int)</code>	204 times	19%
rarely call <code>convertHorizontalDLUsToPixels(int)</code>	163 times	15%
rarely call <code>convertHeightInCharsToPixels(int)</code>	120 times	11%

Usage-Driven Javadocs

org.eclipse.jface.dialogs.Dialog

A dialog is a specialized window used for narrow-focused communication with the user.

Dialogs are usually modal. Consequently, it is generally practice to open a dialog without a parent. A modal

But what are the hot-spots of Dialog?

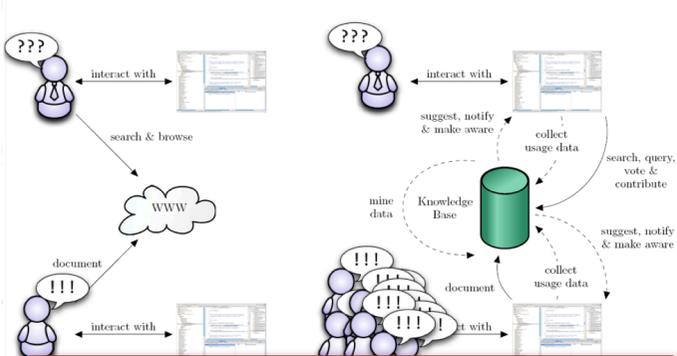

first dialog potentially blocking the UI

Smart Bug Detection

That's "strange"

What have I missed?

From IDE 1.0 to IDE 2.0

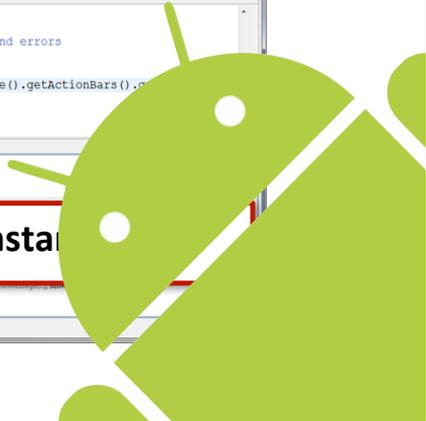

Leverage the Wisdom of the Crowds!

Example Recommender

How do I get an instance of IStatusLineManager?

```
protected void clearStatusLine() {
    IStatusLineManager manager = getViewSite().getActionBars().getPrimaryStatusLineManager();
    manager.setErrorMessage(null);
    manager.setMessage(null);
}

```

X =

It's there.

How about stacktraces.org?

The screenshot shows a web browser window with the address bar containing `http://www.stacktraces.org/`. The main content area displays a Java exception stack trace for an `org.eclipse.swt.SWTException: Invalid thread access`. Below the stack trace are two buttons: `Neues Thema anlegen` and `Themen suchen`. Under the heading `Relevante Themen`, there is a table with three columns: `Übereinstimmung`, `Bewertung`, and `Titel`.

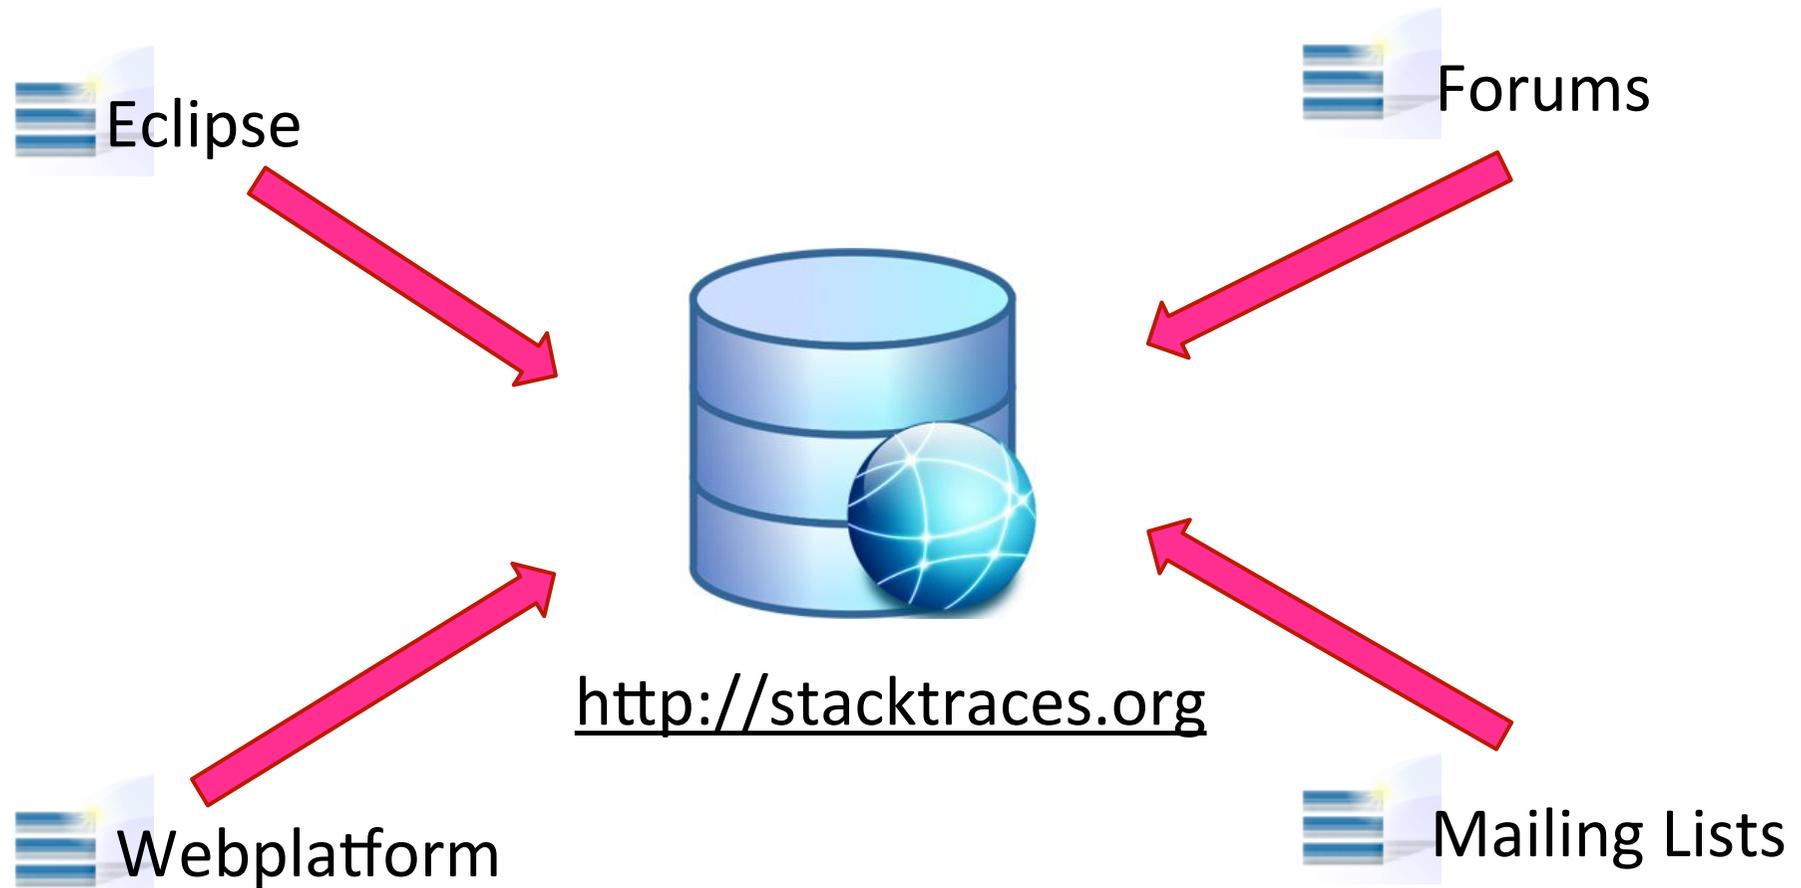

```
Exception in thread "Thread-0" org.eclipse.swt.SWTException: Invalid thread access
at org.eclipse.swt.SWT.error(SWT.java:3884)
at org.eclipse.swt.SWT.error(SWT.java:3799)
at org.eclipse.swt.SWT.error(SWT.java:3770)
at org.eclipse.swt.widgets.Widget.error(Widget.java:463)
at org.eclipse.swt.widgets.Widget.checkWidget(Widget.java:355)
at org.eclipse.swt.widgets.ProgressBar.setSelection(ProgressBar.java:317)
at ExampleWorker$1.run(ExampleWorker.java:32)
at java.lang.Thread.run(Unknown Source)
```

Neues Thema anlegen Themen suchen

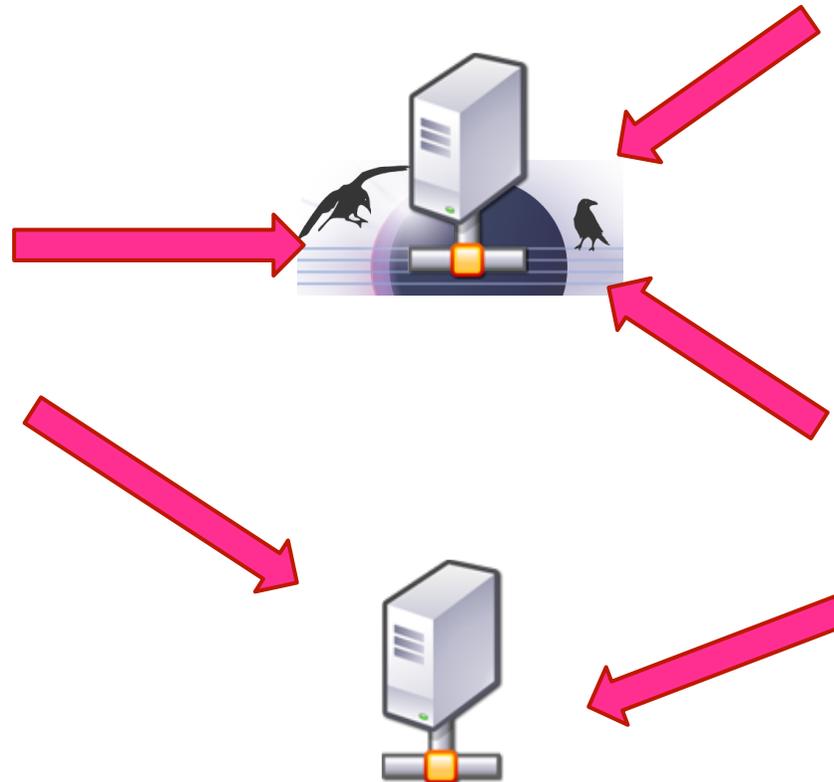

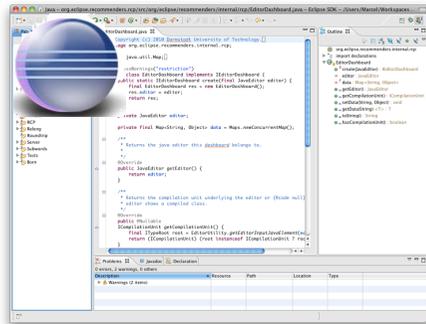

Relevante Themen

Übereinstimmung	Bewertung	Titel
95%	104	Zugriff auf SWT-Komponenten aus verschiedenen Threads
45%	35	Verwendung der Eclipse-Shell statt eigener Display-Instanz
35%	-12	Brauche Hilfe bei Fehler
