Proposal for a Roadmap towards Development of Qualifyable Eclipse Tools

Content

- ▶ **Roadmap**
- ▶ Requirements for Tool Qualification (Standards)
- ▶ Proposals for Goals for Eclipse
- ▶ Proposals for some steps towards Tool Qualification
- ▶ **First steps on the road**
- ▶ Summary

Roadmap

- ▶ **Identify goals & requirements for tool qualification in Eclipse**
- ▶ **Propose process / project**
- ▶ **Demonstrate tool qualification & improve proposal**
- ▶ **Establish proposal: Qualify (selected) plugins**

- ▶ **Is this a Eclipse project? Not a typical 😊**
- ▶ **Is this an Industrial Working Group process?**

Content

- ▶ Roadmap
- ▶ **Requirements for Tool Qualification (Standards)**
- ▶ Proposals for Goals for Eclipse
- ▶ Proposals for some steps towards Tool Qualification
- ▶ First steps on the road
- ▶ Summary

Tool Qualification (Summary)

► Standards require tool qualification: ISO 26262, IEC 61508, DO, EN 50128

► Process:

- Classify **all** used tools (Impact, Use-Cases, Artifacts)
- Qualify critical tools
- Use tools

► Qualification Methods ISO 26262

Table 4 — Qualification of software tools classified TCL3

Methods		ASIL			
		A	B	C	D
1a	Increased confidence from use in accordance with 11.4.7	++	++	+	+
1b	Evaluation of the tool development process in accordance with 11.4.8	++	++	+	+
1c	Validation of the software tool in accordance with 11.4.9	+	+	++	++
1d	Development in accordance with a safety standard ^a	+	+	++	++

Here is a hole
were the new
DO-330
standard fits in

► Some tools provide qualification kits for confidence with evidence into

- Correctness of functions by testing them “validation”
- Development process by documentation
-

Since DO-330 is
scalable, here
could also be a
++

Extension of the ISO 26262?

- **Possible** extension / integration of DO-330 into ISO 26262 could look like:

11.4.10 Development according to a Safety Standard

11.4.10.1 The DO-330 is the first safety standard that is fully applicable to the development of software tools. It is based on Tool Qualification Levels TQL where TQL-1 is the most rigorous level, while TQL-5 is the least one.

11.4.10.2 The mapping from the TCL to the TQL should depend on the SIL level of the system. The mapping is specified in table 4.

ASIL	TCL 1	TCL 2	TCL 3
D	TQL-5	TQL-2	TQL-1
C	TQL-5	TQL-3	TQL-2
B	TQL-5	TQL-4	TQL-3
A	TQL-5	TQL-5	TQL-4

Table 3: Determination of Tool Qualification Levels for DO-330

11.4.10.3 The tool operational requirements, which are the input for tool development according to DO-330, should cover the use cases analysed in clause 11.4.4

- **Similar chapters exist in DO-178C and DO-254**

Table 12-1 Tool Qualification Level Determination

Software Level	Criteria		
	1	2	3
A	TQL-1	TQL-4	TQL-5
B	TQL-2	TQL-4	TQL-5
C	TQL-3	TQL-5	TQL-5
D	TQL-4	TQL-5	TQL-5

- **Extension is not necessary to apply DO-330 in ISO 26262 but could clarify**

Goals for Eclipse IWG

- ▶ **Exchange & share knowledge**
 - Motivate developers & community to provide qualifyable plugins
- ▶ **Provide classification support to users of Eclipse tools**
- ▶ **Support the development of qualifyable tools (“Qualification Kits”)**
 - Validation
 - Safety-Standard (DO-330)
- ▶ **Apply this to reference tools ARTOP, EMF,... ?**
- ▶ **Current status (web-page):**

Auto IWG WP5

WP5: Eclipse Qualification Kit (ISO26262)

This is work package 5 of the [Automotive Industry Working Group](#).

- WP Lead: Bredex (temporary)

Need to share knowledge and resources in the classification/qualification activities of eclipse related products.

Current Eclipse Metadata

Overview

General Information

This section describes general information about this plug-in.

ID:	<input type="text" value="ToolChainAnalyzer"/>
Version:	<input type="text" value="1.5.3"/>
Name:	<input type="text" value="%pluginName"/>
Provider:	<input type="text" value="%providerName"/>
Platform Filter:	<input type="text"/>
Activator:	<input type="text"/> <input type="button" value="Browse..."/>

- ☒ Activate this plug-in when one of its classes is loaded
- ☒ This plug-in is a singleton

Execution Environments

Specify the minimum execution environments required to run this plug-in.

JavaSE-1.6	<input type="button" value="Add..."/>
	<input type="button" value="Remove"/>
	<input type="button" value="Up"/>
	<input type="button" value="Down"/>

[Configure JRE associations...](#)
[Update the classpath settings](#)

Plug-in Content

The content of the plug-in is made up of two sections:

- [Dependencies](#): lists all the plug-ins required on this plug-in's classpath to compile and run.
- [Runtime](#): lists the libraries that make up this plug-in's runtime.

Extension / Extension Point Content

This plug-in may define extensions and extension points:

- [Extensions](#): declares contributions this plug-in makes to the platform.
- [Extension Points](#): declares new function points this plug-in adds to the platform.

Testing

Test this plug-in by launching a separate Eclipse application:

- [Launch an Eclipse application](#)
- [Launch an Eclipse application in Debug mode](#)

Exporting

To package and export the plug-in:

1. Organize the plug-in using the [Organize Manifests Wizard](#)
2. Externalize the strings within the plug-in using the [Externalize Strings Wizard](#)
3. Specify what needs to be packaged in the deployable plug-in on the [Build Configuration](#) page
4. Export the plug-in in a format suitable for deployment using the [Export Wizard](#)

Vision: Eclipse Classification Data

Qualifyable Features

Available Features

Enumerate all Features for which qualification information is available. Other Features shall not be used in safety relevant contexts.

- ✓ Use Case Make:Make All (TCL1)
 - ✓ Use Case Make:Make Clean (TCL1)
 - ✓ Use Case Make:Make Executables (TCL1)
- ✓ Feature Make:Call Tools (TCL1)
- ✓ Feature Make:Dependencies (TCL1)

Buttons: Add..., Remove, Properties..., Add Action, Add Class, Add Method

Total: 6

Supported Input / Outputs

For the selected features specify the supported artifacts

- Artifact Coverage Report:SVNFile
- Artifact Executable
- Artifact Library:SVNFile
- Artifact Logfile:SVNFile
- Artifact Makefile:SVNFile
- Artifact Mapfile
- Artifact Object Code

Buttons: Add..., Remove, New...

Errors

For the selected features specify the potential error classes. The existing errors can be found at www.validas.com

- ✓ Error Make.Make Executables:Make Builds Wrong Binary (HIGH)
- ✓ Error Make.Make Executables:Make Modifies Data (HIGH)
- ✓ Error Make.Make Executables:Old Binary Unchanged (HIGH)
- ✓ Inferred Feature Error Make Used Wrongly in Call Tools in Make Executables (HIGH)
- ✓ Inferred Feature Error Make Used Wrongly in Dependencies in Make Executables (HIGH)
- ✓ Inferred Feature Error Make Used Wrongly in Dependencies in Make PIL in Make Executables (HIGH)
- ✓ Inferred Feature Error Make Used Wrongly in Dependencies in Make SIL in Make Executables (HIGH)

Buttons: Up, Down

Overview Dependencies Runtime Extensions Extension Points Build MANIFEST.MF plugin.xml build.properties **Qualifyabe Features** Qualifcation Evidence

Proposed Role: Eclipse Validator

There is much (different) work to do such that we need a new kind of worker: The Validator

- ▶ Should provide confidence
- ▶ Should be more formalized than a committer
- ▶ Should have qualifications e.g. by filling out questionnaires on
 - Eclipse qualification process
 - DO-330
- ▶ Should have responsibilities (answer to questions)
- ▶ Should earn “credits” for each successful validation action
 - Executed reviews
 - Formulated requirements
 - Created use/test cases
 - Feedback
 - ...

- ▶ **Comparable:**
Confidence in ebay:

slotsch (25 ★)

Positive Bewertungen (der letzten 12 Monate): 100%

- ▶ Summary

Proposals

Elaborate Process

Demonstrate Process

Following activities are necessary to achieve goals:

- ▶ **Agree on focus, e.g. “Metadata extension for qualification information”**
- ▶ **Provide classification support to users of plugins**
 - Use case
 - Potential errors
 - Possible mitigations for errors
 - TCL inference
- ▶ **Provide qualification support**
 - Create checklist for DO-330 requirements (depending on the TQL)
 - Qualification data (general, plugin specific, user adaptable)
 - Requirements (general, development, operational)
 - Check Eclipse against the checklist, create
 - Mapping of Eclipse -> DO-330
 - Identify gaps: missing data/requirements
 - Provide model (EMF?) for the missing data
- ▶ **Demonstrate it: Small example e.g. EclipseCon**
- ▶ **Validate it: bigger example**

Content

- ▶ Roadmap
- ▶ Requirements for Tool Qualification (Standards)
- ▶ Proposals for Goals for Eclipse
- ▶ Proposals for some steps towards Tool Qualification
- ▶ **First steps on the road**
- ▶ Summary

First Steps on the Road

- ▶ **Create a checklist to show the DO-330 compliance**
- ▶ **Make a/some simple example tool(s) that shall comply with DO-330**
- ▶ **Work on selected topics: Requirements, Test, Code, ...**
 - Analyze existing Eclipse process
 - Analyze possibilities for the topic e.g. RIF, tracing, tests,...
 - Create example document (eventually based on existing methods)
 - Check DO-330 compliance
 - Create model (for creation of document)
 - Review/Validate for:
 - Expressiveness
 - practicability
 - possible improvements
 - Make proposal for Eclipse integration (part)
- ▶ **Until DO-330 is completely satisfiable**
- ▶ **Make integrated proposal for Eclipse Extension (EMF,..)**

Checklist for DO-330 compliance

- Create an Checklist for DO-330 compliance (unvalidated) draft:

DO330.xlsx - Microsoft Excel

Arbeitsmappenansichten: Normal, Seitenlayout, Umbruchvorschau, Benutzerdef. Ansichten, Ganzer Bildschirm

Anzeigen: Lineal, Bearbeitungsleiste, Gitternetzlinien, Überschriften

Zoom: 100 %

Fenster: Fenster einfrieren, Neues Fenster anordnen, Alle Fenster einfrieren

Teilen: Ausblenden, Einblenden

Nebeneinander anzeigen: Synchroner Bildlauf, Fensterposition zurücksetzen

Aufgabenber. speichern, Fenster wechseln, Makros

B46 The Tool Requirements should include all functional and interface-related requirements that will be implemented in the tool.

DO-330 Topics

► Structure of DO-330

Existing Methods: Requirements

- ▶ Currently not practiced in Eclipse
- ▶ RMF / ProR (Incubation):

Specification Document			
	ID	Description	Link
1	REQ-1	Dies ist eine Demo von ProR	0 ▷ REQ ▷ 2
	▷		REQ-5
	▷	Links können auch Attribute haben.	REQ-6
1.1	REQ-2	Hierarchien beliebiger Tiefe werden unterstützt.	
1.2	REQ-3	Der Linke Rand hilft bei der Orientierung	
1.2.1	REQ-4	... und die erste Spalte wird eingerückt.	
2	REQ-5	Im Properties-View werden alle Attribute angezeigt.	1 ▷ REQ ▷ 0
3	REQ-6	Im Editor nur die, die man sehen will.	1 ▷ REQ ▷ 0

- ▶ general approach, not tailored for tool requirements
- ▶ Adoptable to tool requirements by creating corresponding requirements types
- ▶ First Investigation
 - Nice usability e.g. for creating new requirements
 - Polymorphic links (any requirement can be linked)
 - Extensible to design / test / ...?
 - Do we need RIF within Eclipse?

Tool Requirements for Tool Chain Analyzer
Version 0.2

Validas AG

3 General Information

This section contains the general information on the Tool Chain Analyzer generated from the corresponding plugin metadata

- Name: Tool Chain Analyzer
- ID: de.validas.toolchainanalyzer
- Version: 1.5.3
- Provider: Validas AG
- Tool Qualification Level (TQL): TQL-1

from
MANIFEST.MF

Overview

General Information

This section describes general information about this plug-in.

ID: de.validas.toolchainanalyzer

Version: 1.5.3

Name: Tool Chain Analyzer

Provider: Validas AG

Qualification Level: TQL-1

From Tool
Requirements
Model

5.4 Customization Requirements

The tool shall be customized to the resources of the computer where it is executed.

5.4.1 Stack Size

The stack size shall be settable. The default stack size should be 400 MB

5.4.2 Heap Size

The heap size shall be settable. The default heap size should be 1000 MB.

5.5 Tool Interface Requirements

The tool chain analyzer shall have the following interfaces.

5.5.1 Graphical User Interface

The graphical user interface consists of different views and property dialogs.

5.5.1.1 Structure View

The structure view represents the tool chain models in a tree view with the structure how the elements are modeled. The structure views also contains the actions to create, move and delete elements. Furthermore it can be used to start actions like the import and export of tool models.

5.5.1.2 Property View

The property view shows the properties (attributes and relations) of the elements selected in the tree view. They can be edited either directly in the view or in property dialogs that start when the elements are double-clicked.

5.5.1.3 Property Dialogs

The property dialogs are used to edit long text fields or complex relations in the modeled elements. They are started from the property view.

5.5.1.4 Flow View

The flow view shows the information flows within the model, e.g. from one tool to another via the artifact that is written and read. Furthermore the error derivation flow from the general error model to the features and use cases.

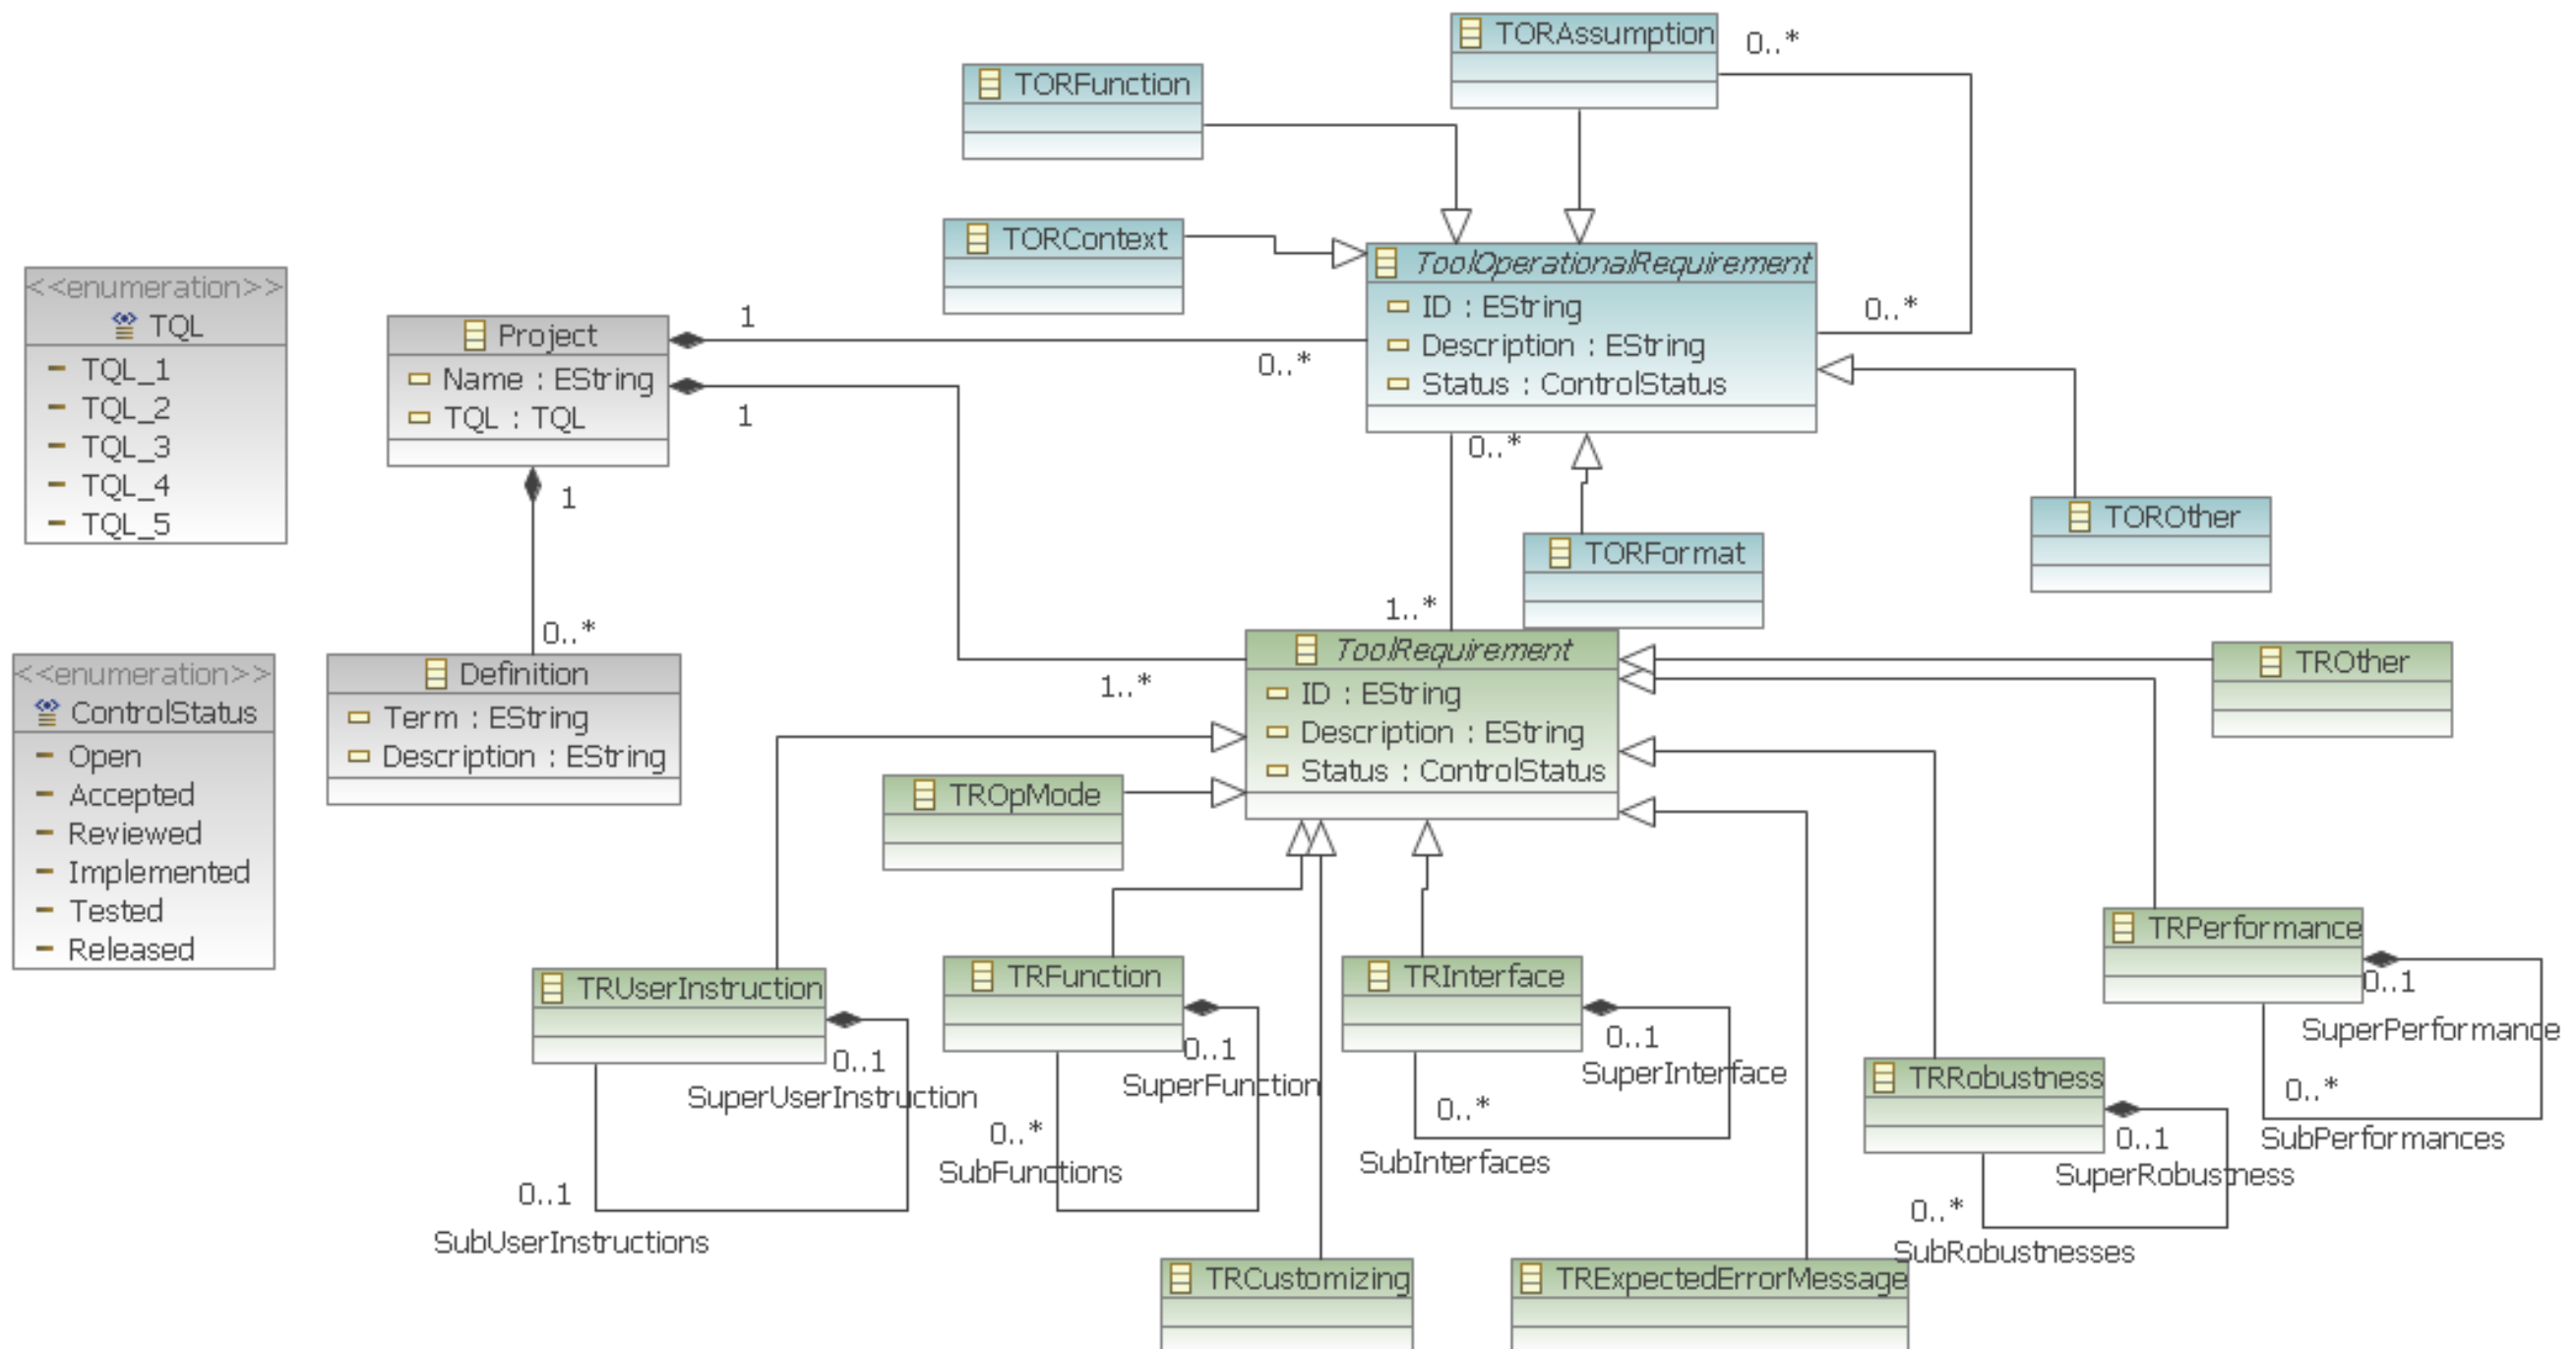

5.5.2 File Interface

The tool chain models shall be persistent to files. The tool chain analyzer loads models from files and writes the back into files.

5.5.3 DOT Interface

For drawing the images to explain the error flow in the model the graphviz tool with the DOT language. The intermediate files are accessible and can be modified or integrated into other images.

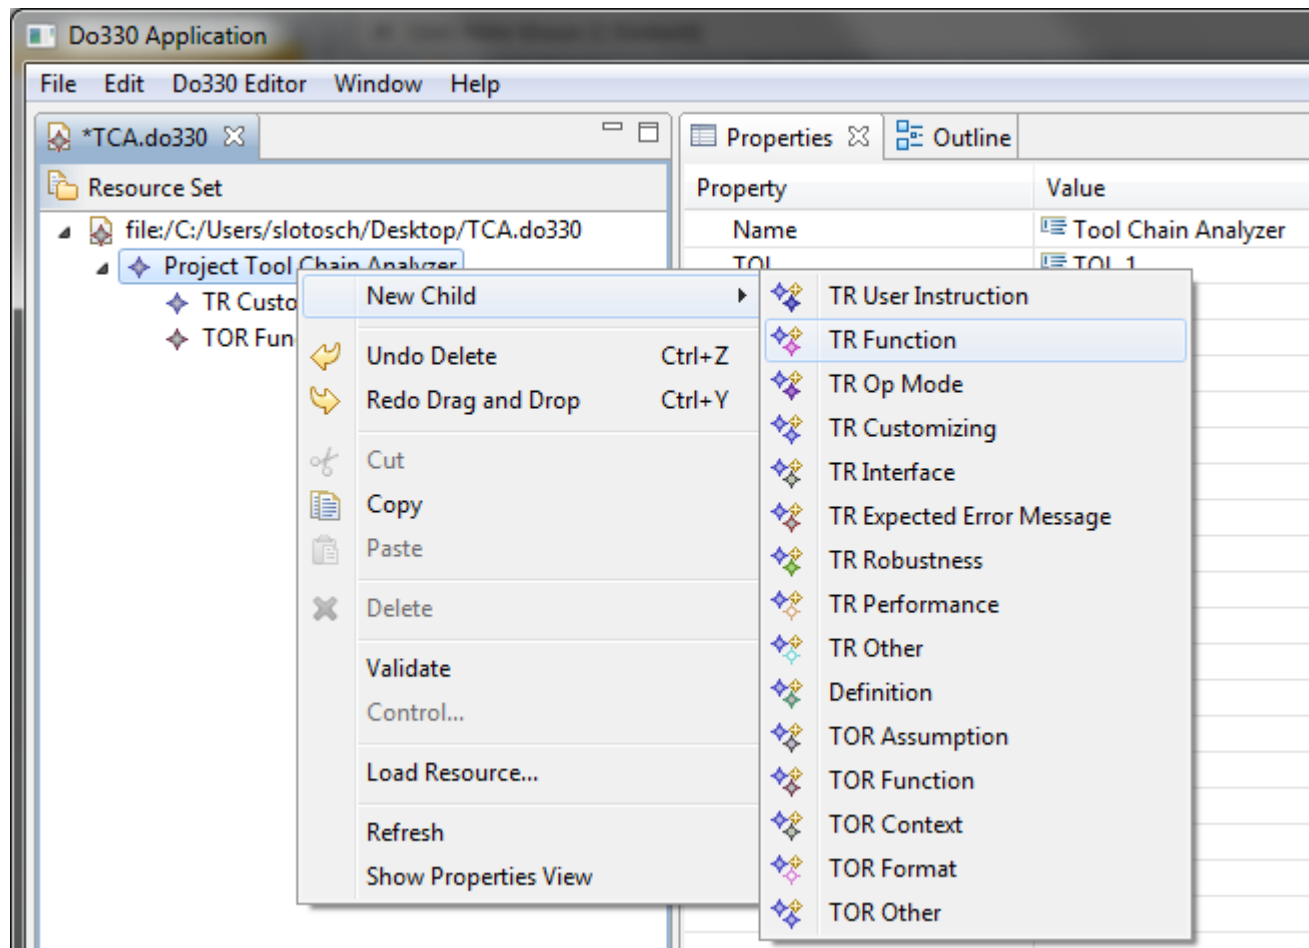

► EMF-Metamodel (Draft) for Tool Requirements

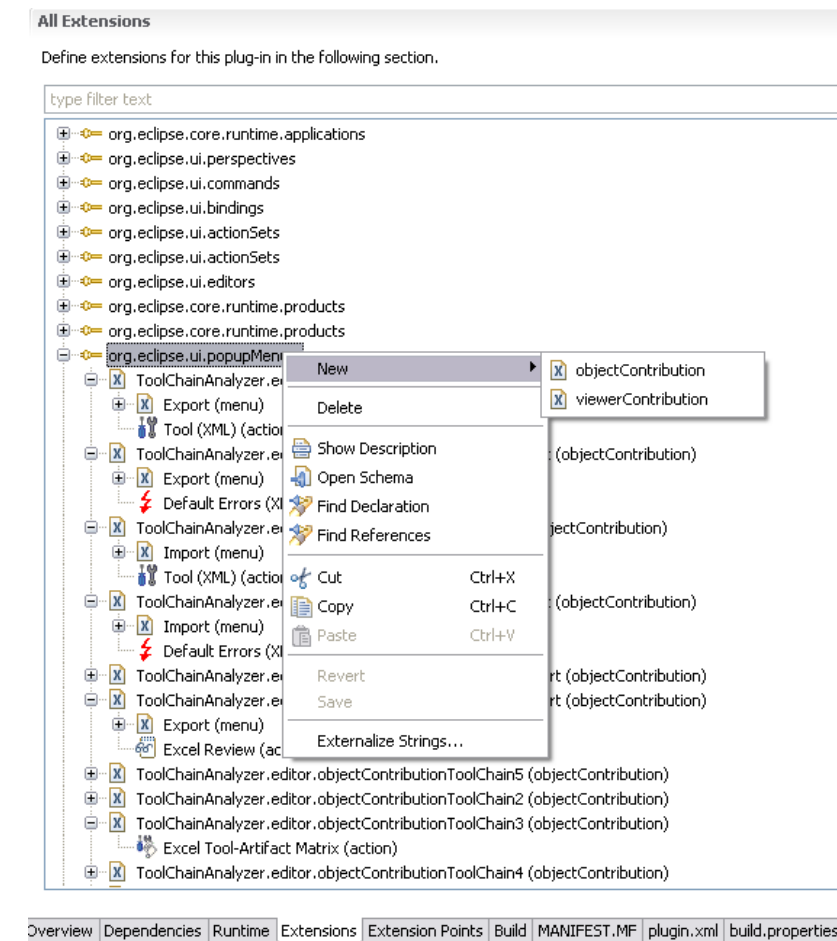

Create Example Model

► Using the default EMF Editor

Comparable: Plugin Extension

- Shows how simple requirements could be created with Eclipse
- The example (DO-330 conforming) document can be generated completely from the model
- Tracing: TOR <-> TR is done using Eclipse association editors

Content

- ▶ Roadmap

- ▶ Proposals for Goals for Eclipse
- ▶ Proposals for some steps towards Tool Qualification
- ▶ **First steps on the road**
- ▶ **Summary**

Summary

- ▶ **Roadmap towards development of qualifyable Eclipse tools & plugins**
 - Classification
 - Qualification
 - Usage
- ▶ **Applicable to all relevant standards (ISO 26262, IEC 61508, DO-178C, EN 50128,..)**
- ▶ **Metadata extension for qualification information of plugins**
- ▶ **Much work to do**
 - Checklist
 - Gaps & Mapping
 - Extension of Eclipse processes, metadata, community
 - Improve eclipse plugins where needed
- ▶ **First steps started**
- ▶ **Proposed new role for that work: Eclipse Validator**
- ▶ **Validas will contribute**

Thank You!
