Thierry Monteil	monteil@laas.fr
Khalil Drira	khalil@laas.fr

OM2M ?

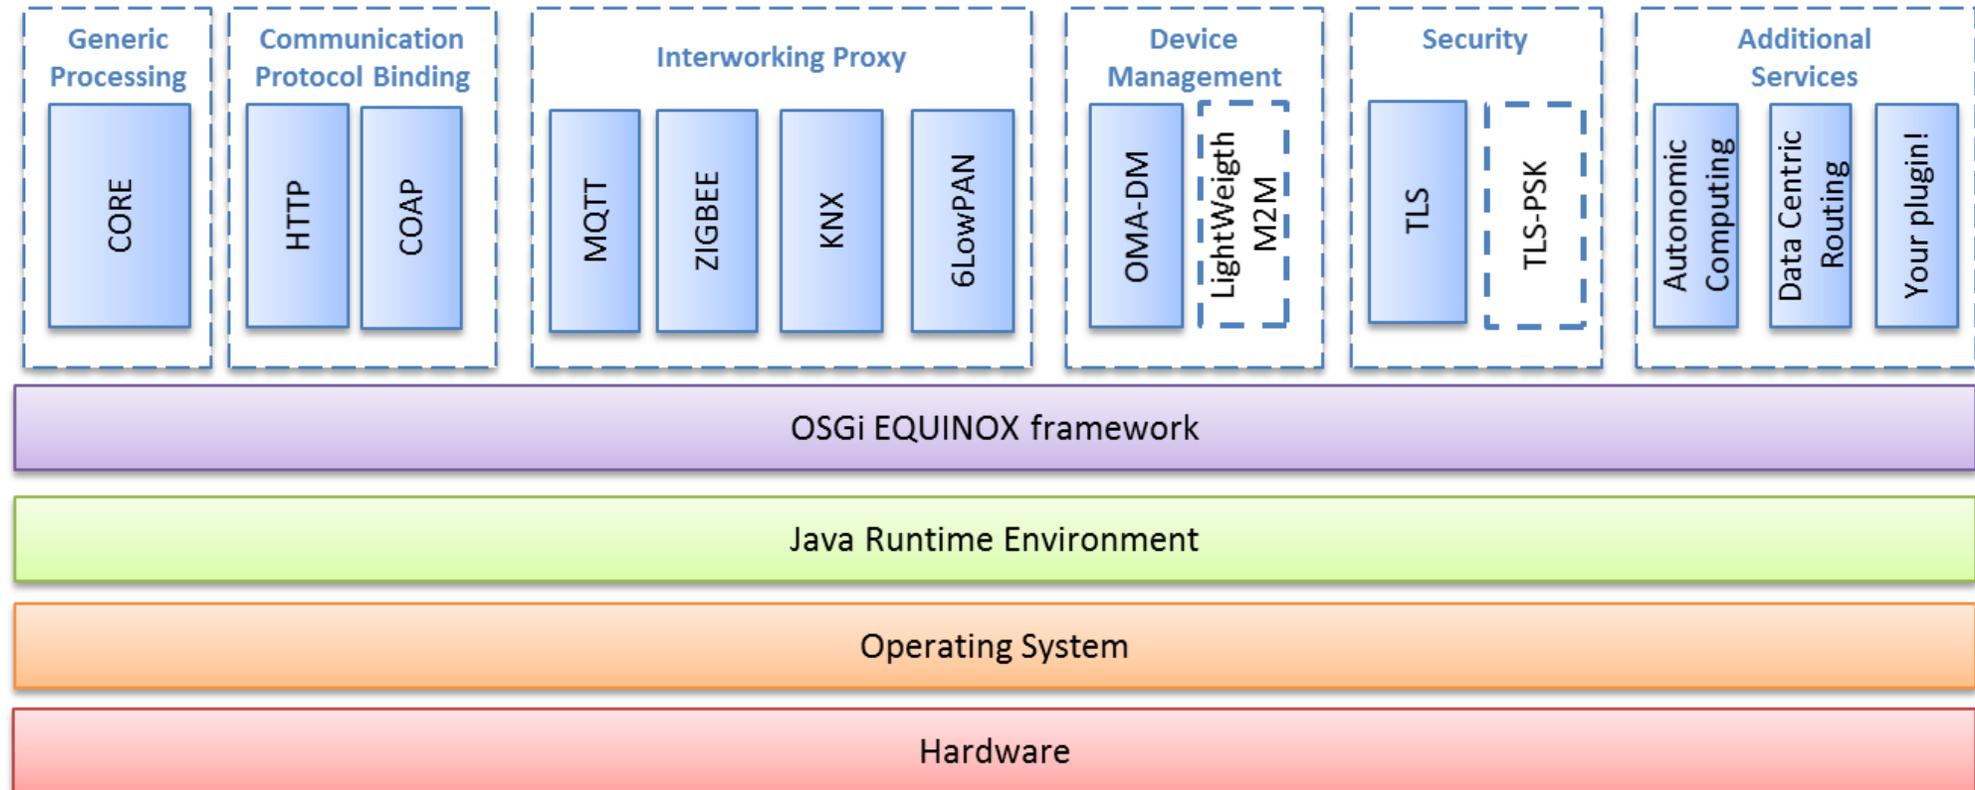

- › **Connecting** M2M/IoT devices
- › **Horizontal** service **platform**
- › **Restful** architecture with a **generic** set of **capabilities** for M2M services
- › Allow developing services **independently** of the underlying network
- › Facilitate **deployment** of **vertical** applications.
- › **Compliant** to **ETSI M2M** Standard, and soon, to the **OneM2M** Standard
- › Features:
 - App/Dev discovery, App/Dev registration, AR mgmt., Group mgmt., subscription mgmt., etc.

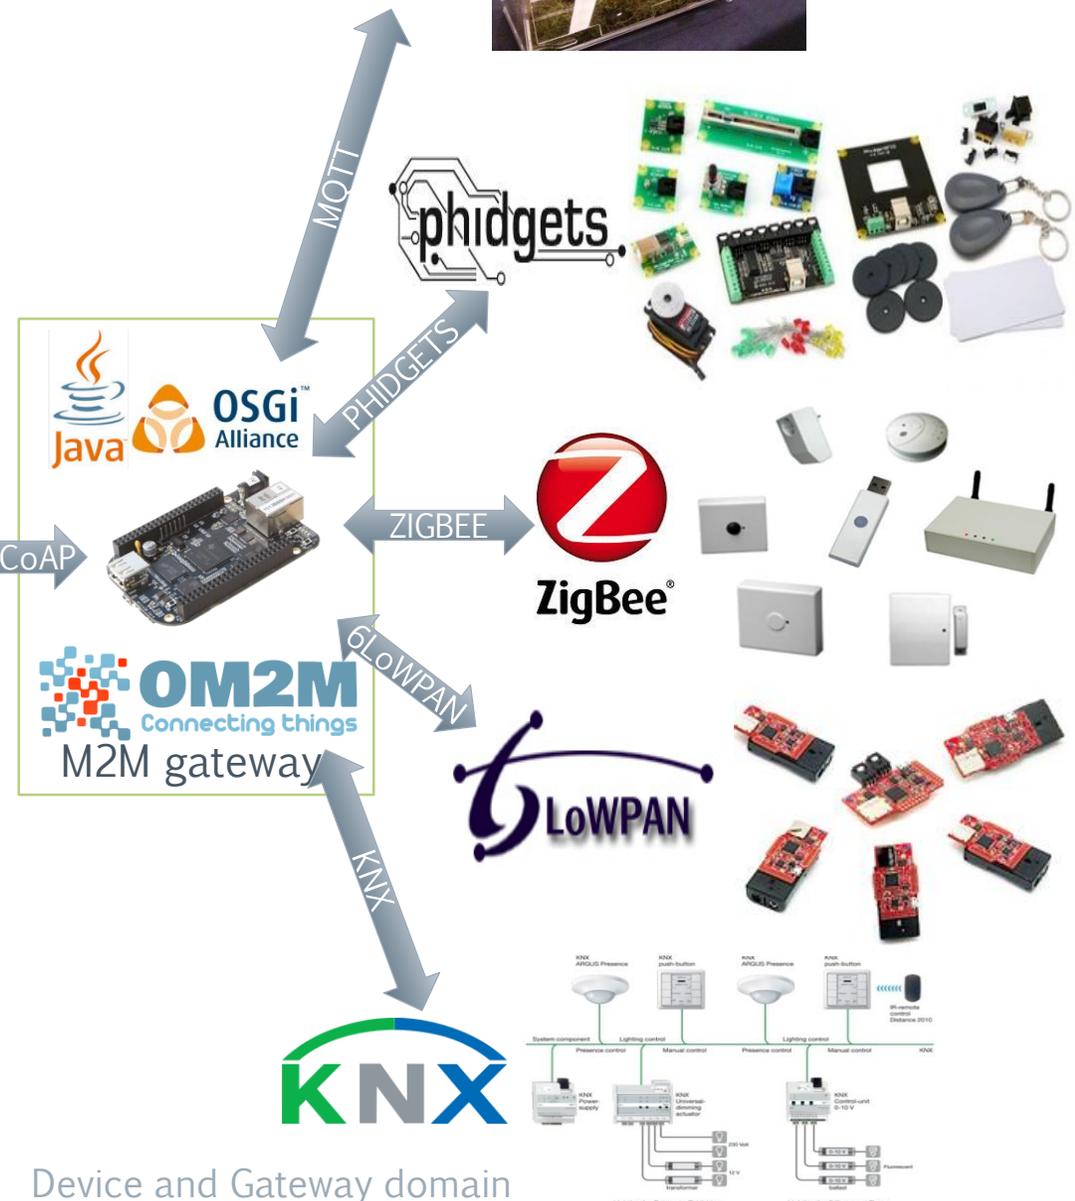

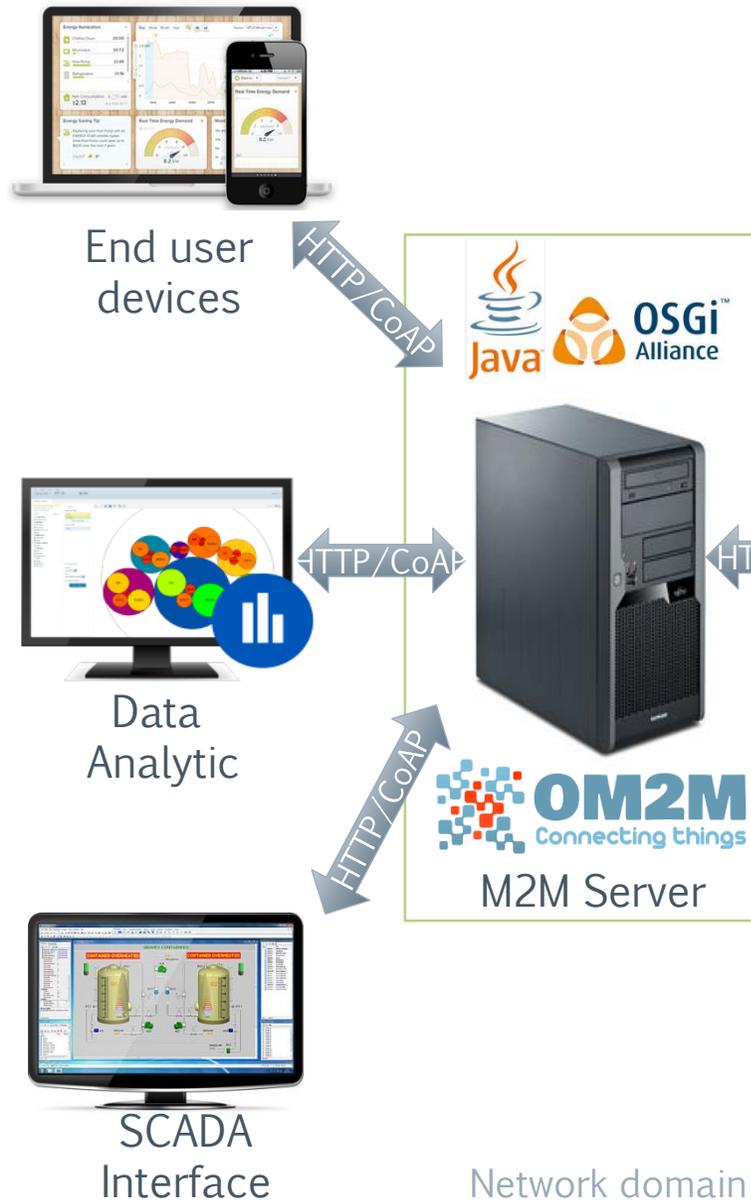

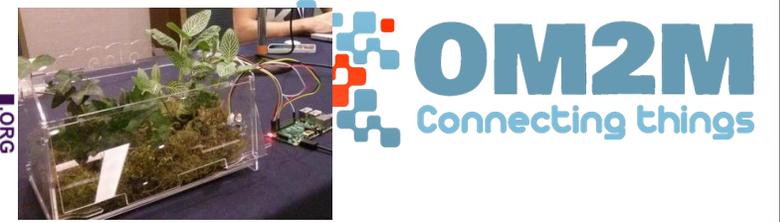

Dev / Code

- OM2M is a java platform running on top of an OSGi Equinox runtime which make it highly extensible via plugins.
- Each SCL includes required plugins.

OM2M main building blocks

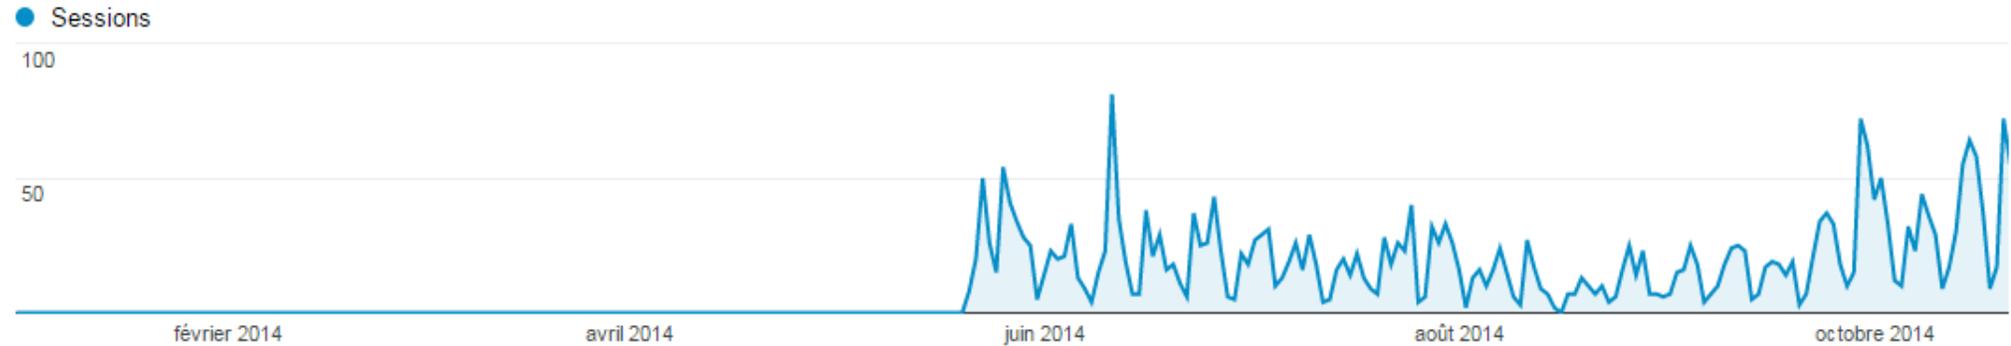

Architecture

Project Stats

Project plan

› Next releases

– Short term

› Date : around December 2014 ??

› Key features:

- **MQTT** Client
- **ZigBee** interworking proxy
- **6lowpan** interworking proxy

– Mid-Term

› Date : 1st / 2nd quarter of 2015 ??

› Key features :

- A **DSCL entity** : extend om2m to “powerful” devices : smartphone, capable sensor/actuator
- **JSON/BSON, CORE Link** formats
- **Bluetooth** interworking proxy

Key challenges

- › MQTT communications
 - Seamless integration of client and broker
- › ZigBee IP
 - Configuration problems related to some devices
- › 6lowpan IP
 - Very short data frames (~50 bytes)
 - New data format (JSON, Core Link)
- › A Dashboard !
 - OpenSCADA ? Birt ? Home made?
- › Evolution towards the OneM2M standard
 - Updating the data structures

Collaboration opportunities

- › Already using:
 - **Californium** for CoAP
 - **Paho** for MQTT Client

- › Planning to use
 - **Mosquito/Moquette** for MQTT Broker
 - **Birt** for data visualization
 - **OpenSCADA** for dashboard
 - **OMA LWM2M** for device management
 - **Concierge** for mobile deployment
